HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

THALES Research & Technology

Amélioration des performances des Lasers à Cascade Quantique : Étude du confinement optique et des propriétés thermiques

J-Y Bengloan

Thèse de doctorat de l'Université de Paris XI – Sud (Orsay)

Thèse effectuée à Thales Research & Technology (TRT)
à l'Université de Paris VII

Performance optimisation of Quantum Cascade Lasers: Investigation of the optical confinement and thermal properties

J-Y Bengloan

Thèse de doctorat de l'Université de Paris XI – Sud (Orsay)

Thèse effectuée à Thales Research & Technology (TRT)
à l'Université de Paris VII

1. Introduction

2. Waveguide Optimisation in GaAs/AlGaAs QCLs

GaAs based guides (plasmon enhanced) / Limitations
AlGaAs and GaInP Guides

3. Enhancement of thermal dissipation properties of GaInAs/AlInAs/InP QCLs

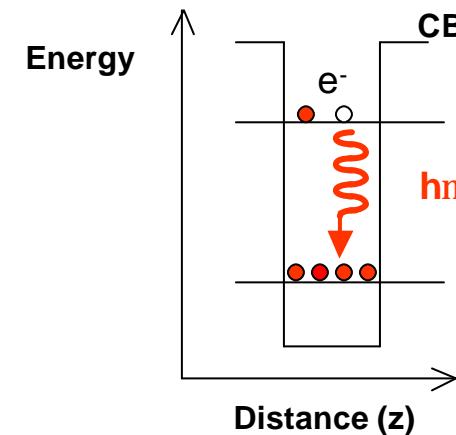

Selective current injection by proton implantation
Thick electro-plated gold

4. Conclusion

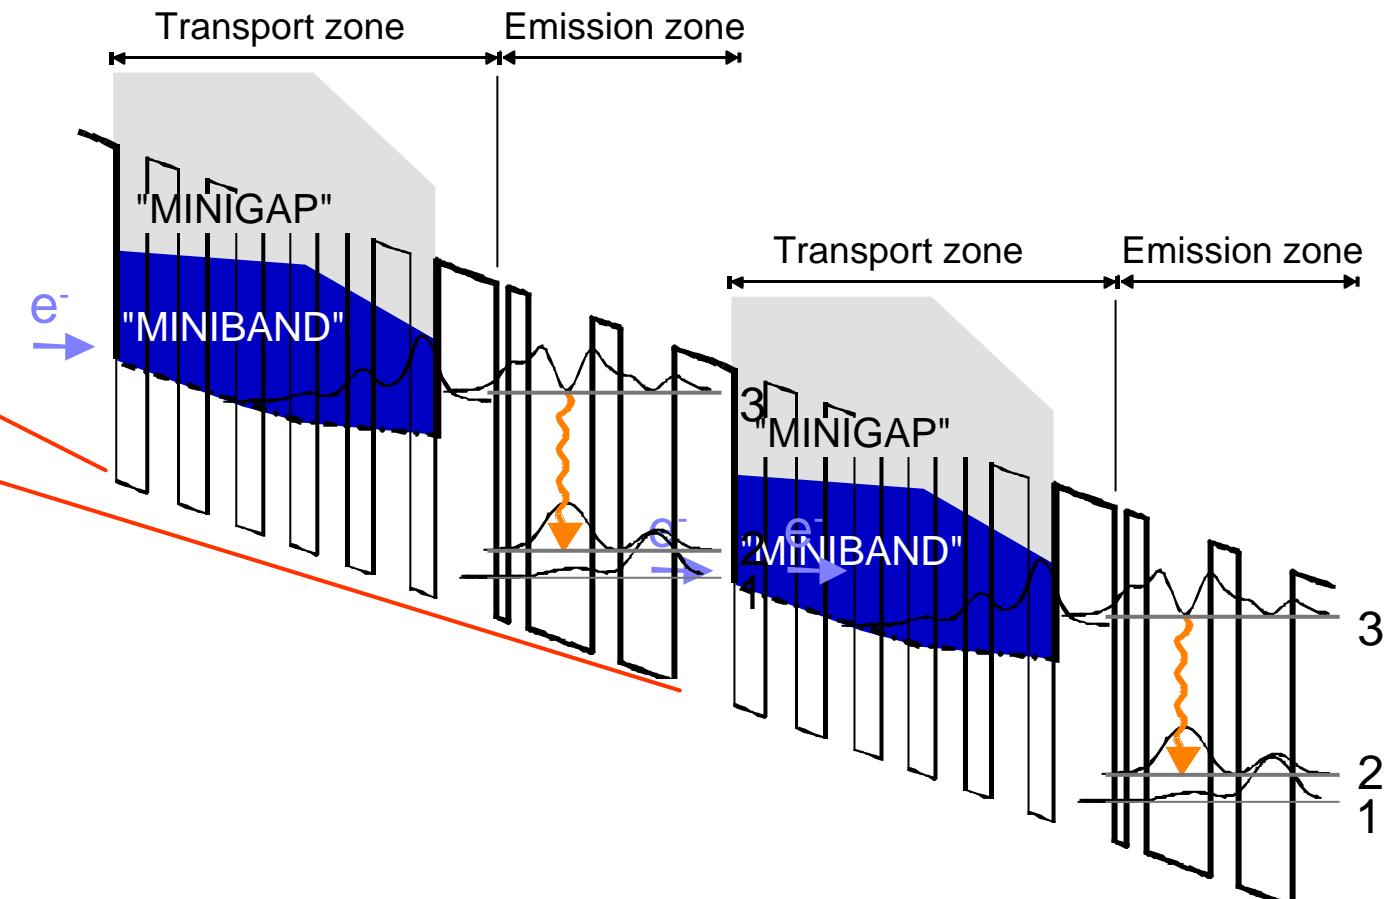

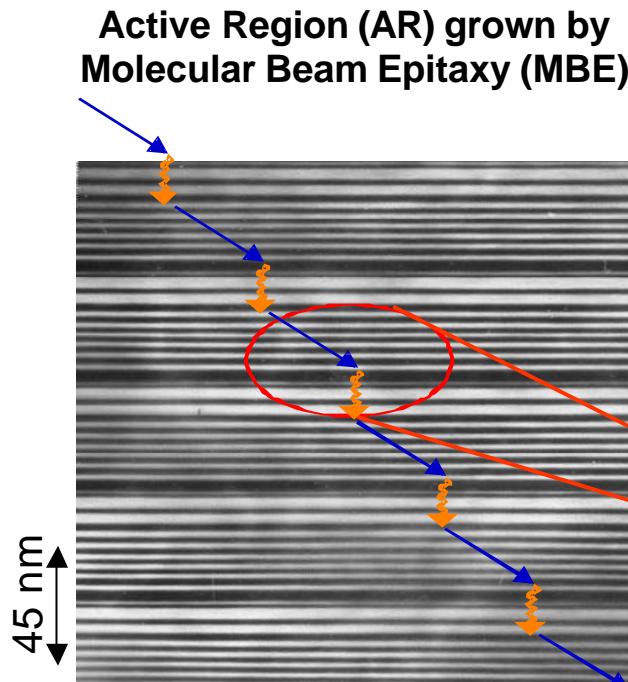

Quantum Cascade Lasers (QCLs)

Main Properties

- **INTERSUBBAND** transitions
- **UNIPOLAR** : only one type of carrier used (e^-)

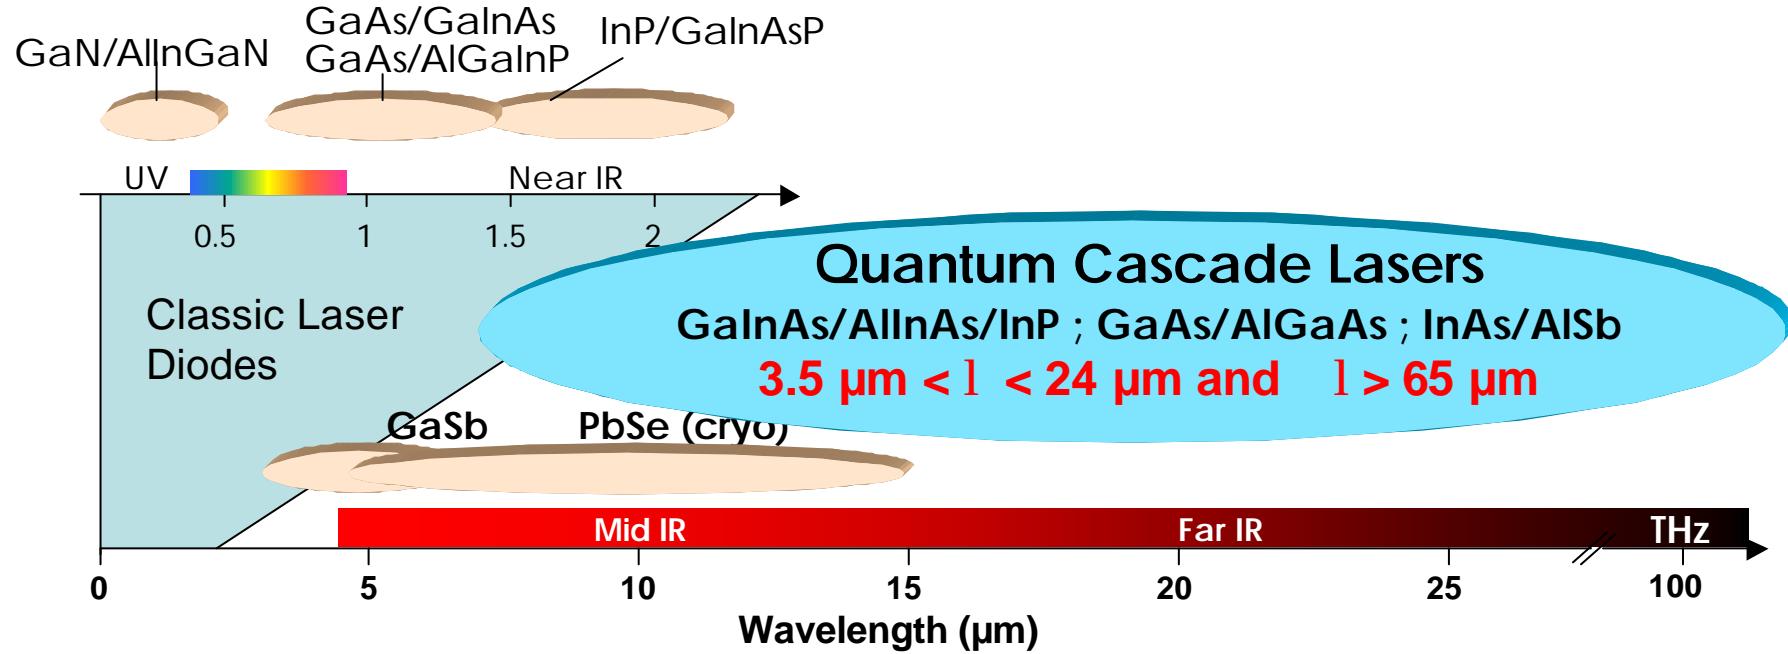

Quantum Cascade Lasers (QCLs)

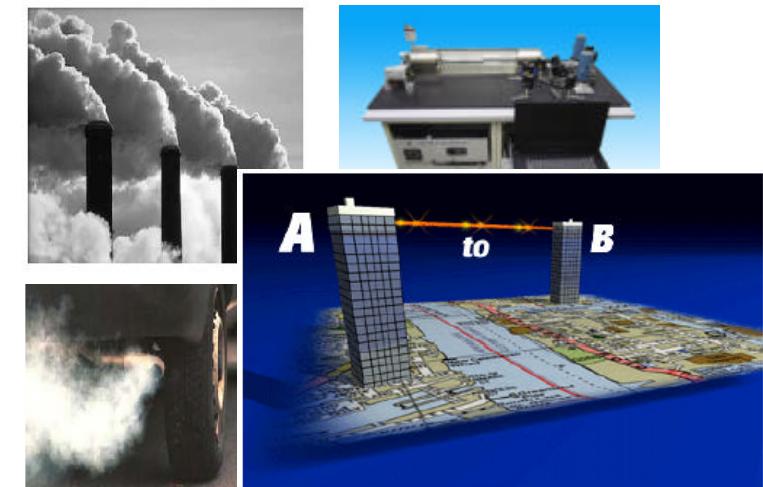

- **CASCADE scheme :**
 - Recycling of carriers
 - N periods = N photons per carrier

Spectral range of QCLs

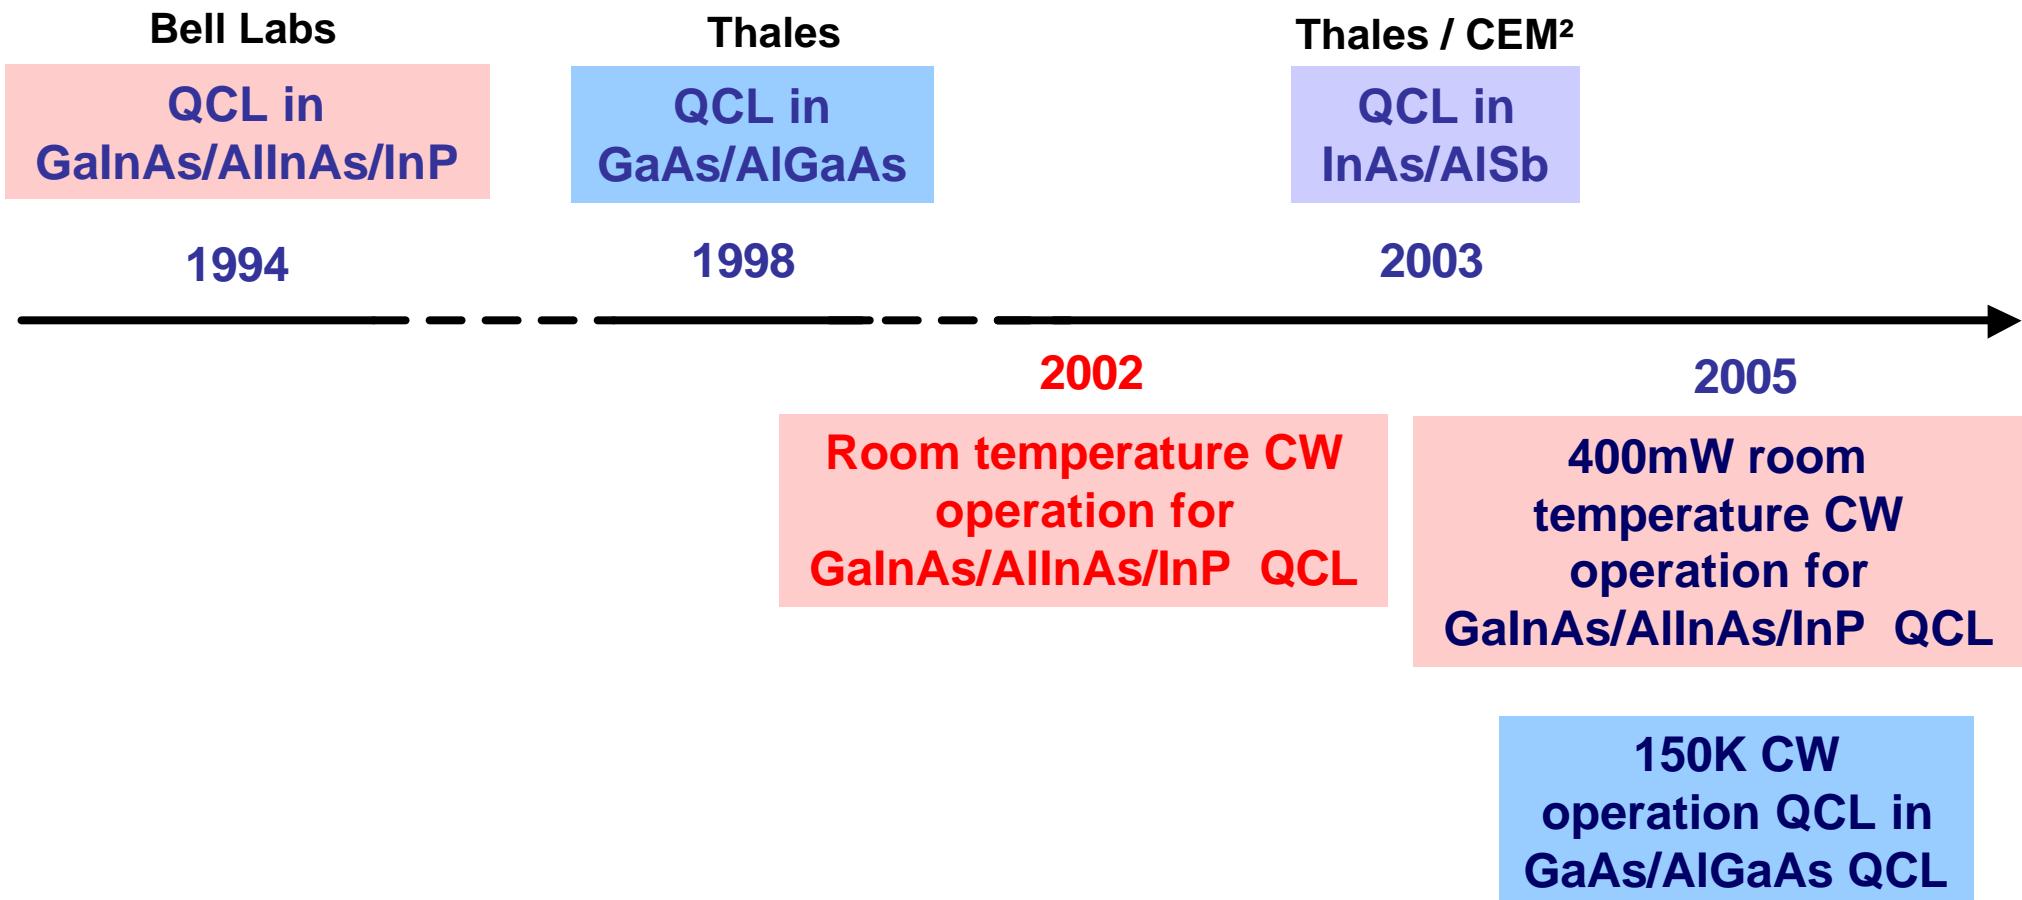

Applications:

- Spectroscopy and high sensitive Gas detection
Environmental, Medical, Security
- Free space optical communication
Atmospheric transparency windows : $3 - 5 \mu\text{m}$ and $8 - 12 \mu\text{m}$
- Optical countermeasures

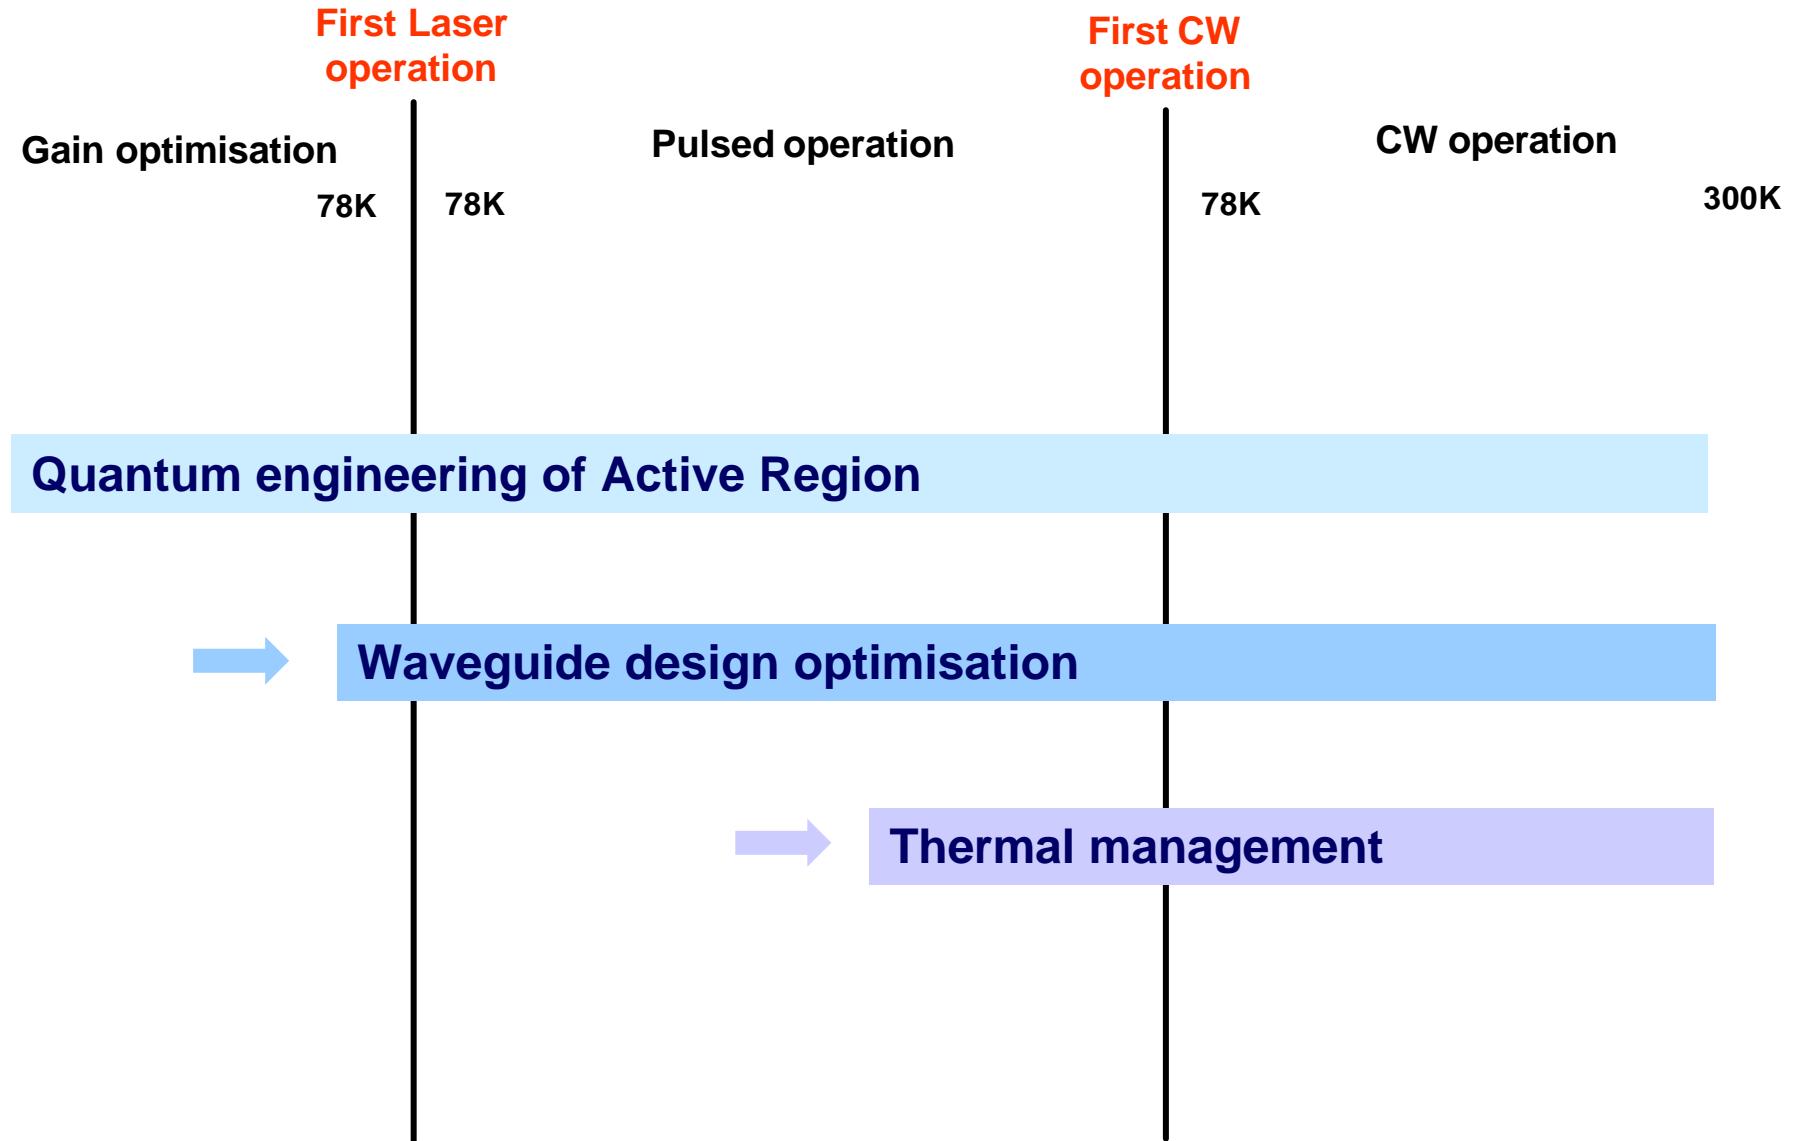

QCL History

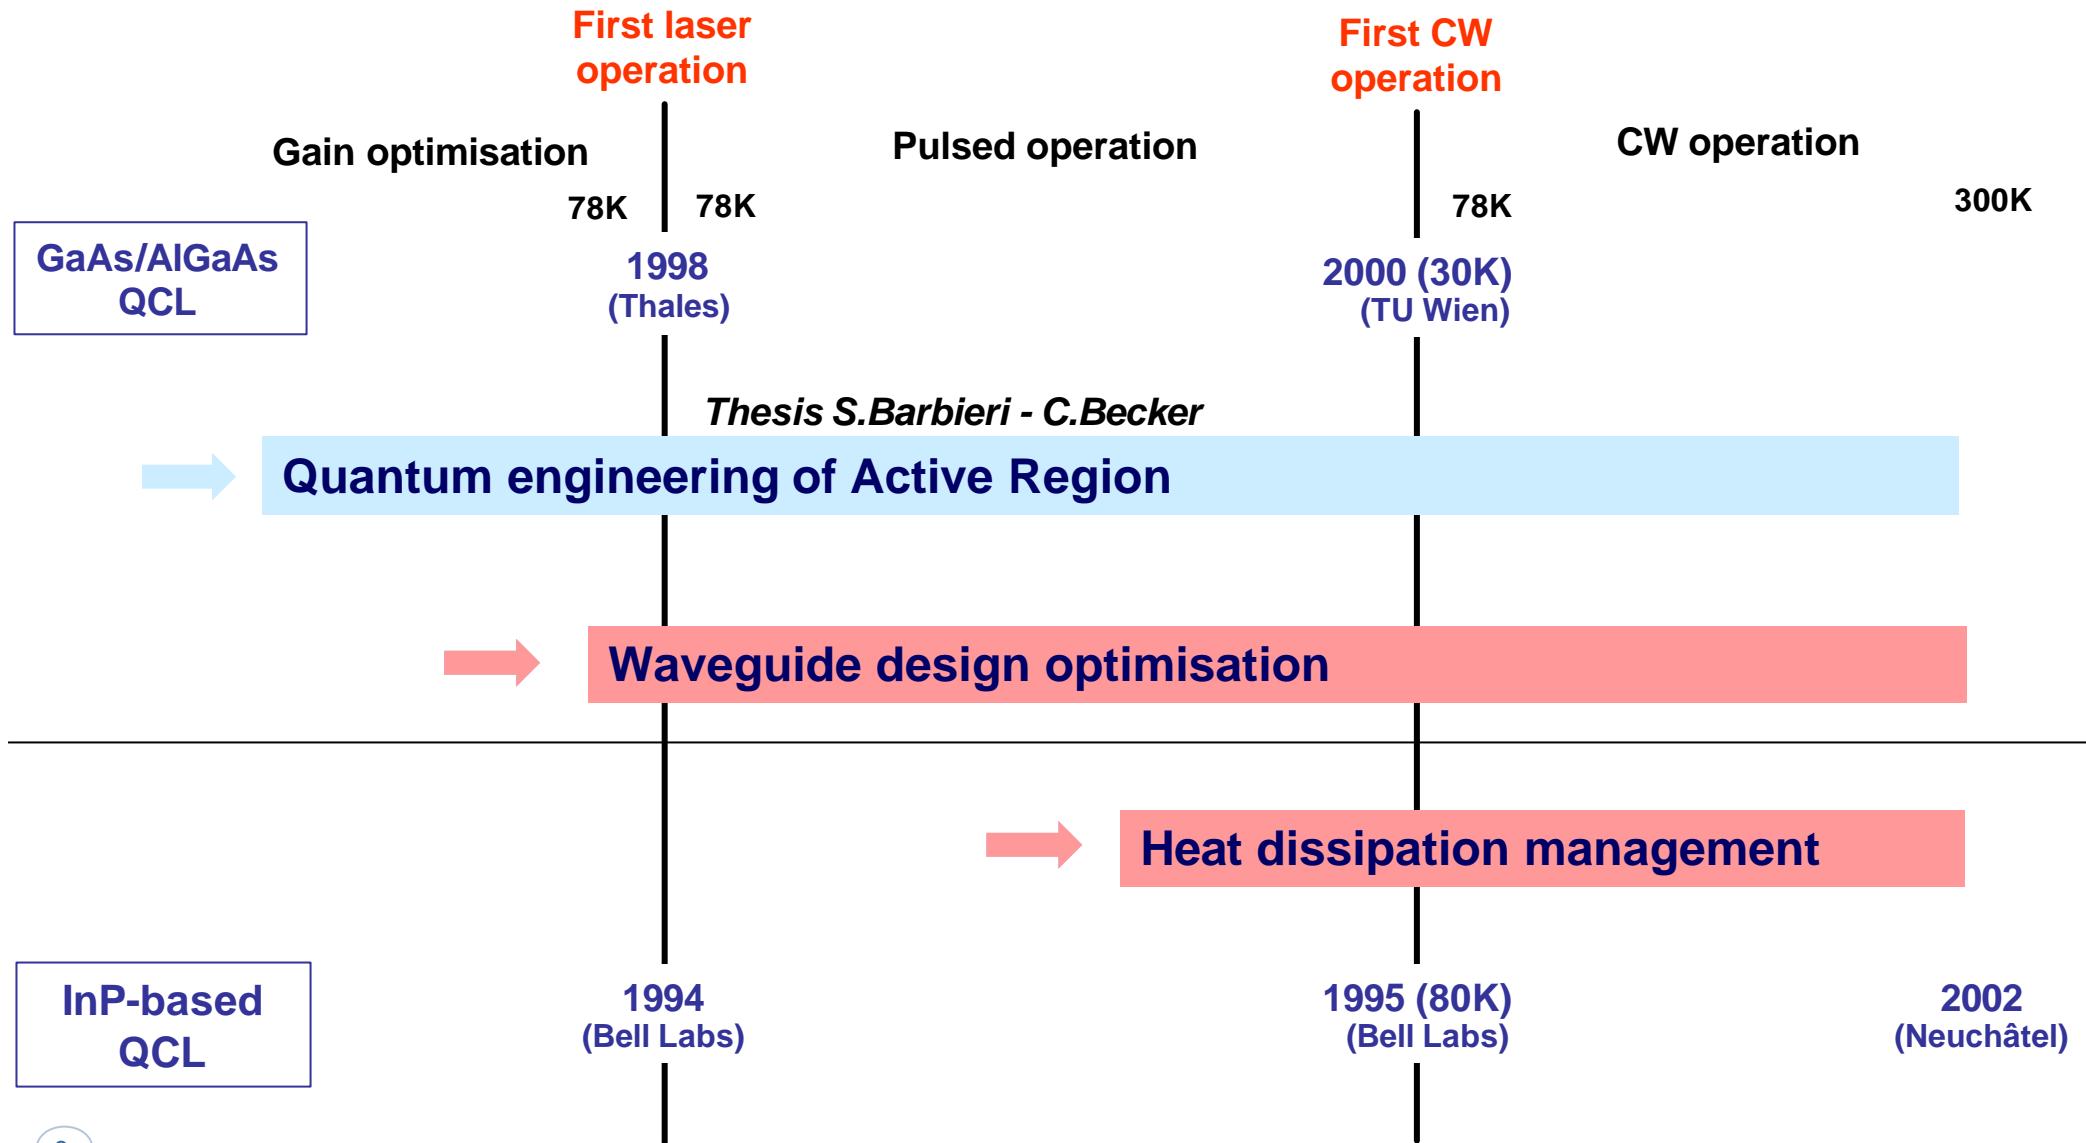

CW: Continuous Wave

From intersubband emission to CW laser operation

From intersubband emission to CW laser operation

1. Introduction

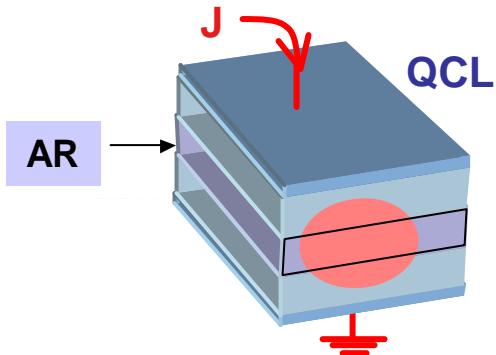

2. Waveguide Optimisation in GaAs/AlGaAs QCLs

GaAs based guides (plasmon enhanced) / Limitations
AlGaAs and GaInP Guides

3. Enhancement of thermal dissipation properties of GaInAs/AlInAs/InP QCLs

Selective current injection by proton implantation
Thick electro-plated gold

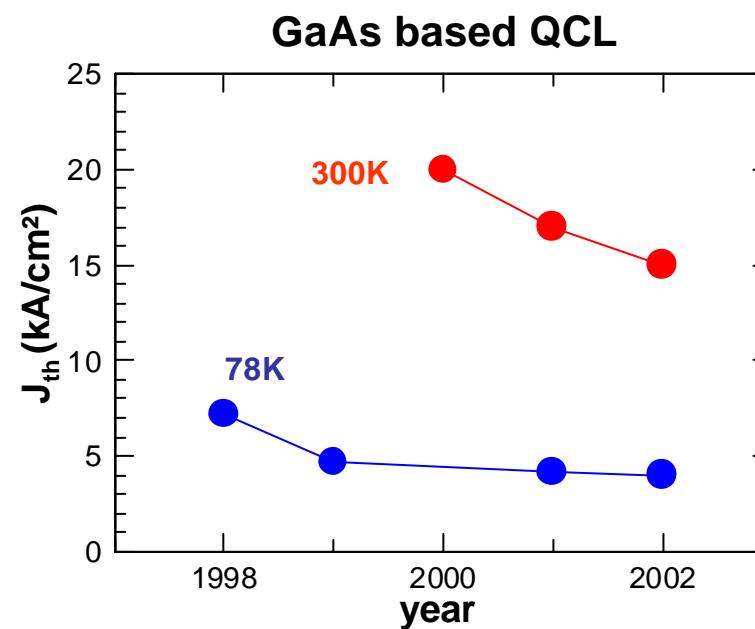

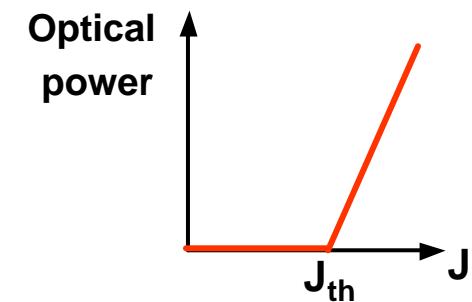

4. Conclusion

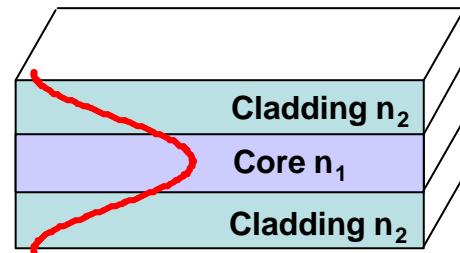

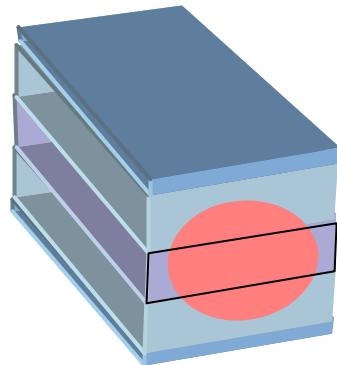

Pulsed operation QCL development: Reduction of the threshold current density J_{th}

$$J_{th} = (a_{wg} + a_m) / g G$$

- Quantum engineering of Active Region : g
- Waveguide design optimisation : a_{wg}, G

Waveguide principle

Guiding condition : $n_1 > n_2$

Waveguide optimisation by numerical simulations :

- 1D Simulations : Transfer Matrix Method (TMM)

choice of appropriate layer compositions and thicknesses

Increase figure of merit
 $c = G / a_w$

Decrease
 $J_{th} = (a_w + a_m) / gG$

Current GaAs QCL waveguides (1)

GaAs Plasmon enhanced waveguide with highly doped cladding layers

$n_{\text{eff}} = 3.19$
 $a = 17 \text{ cm}^{-1}$
 $G = 28\%$
 $l = 9.4 \mu\text{m}$

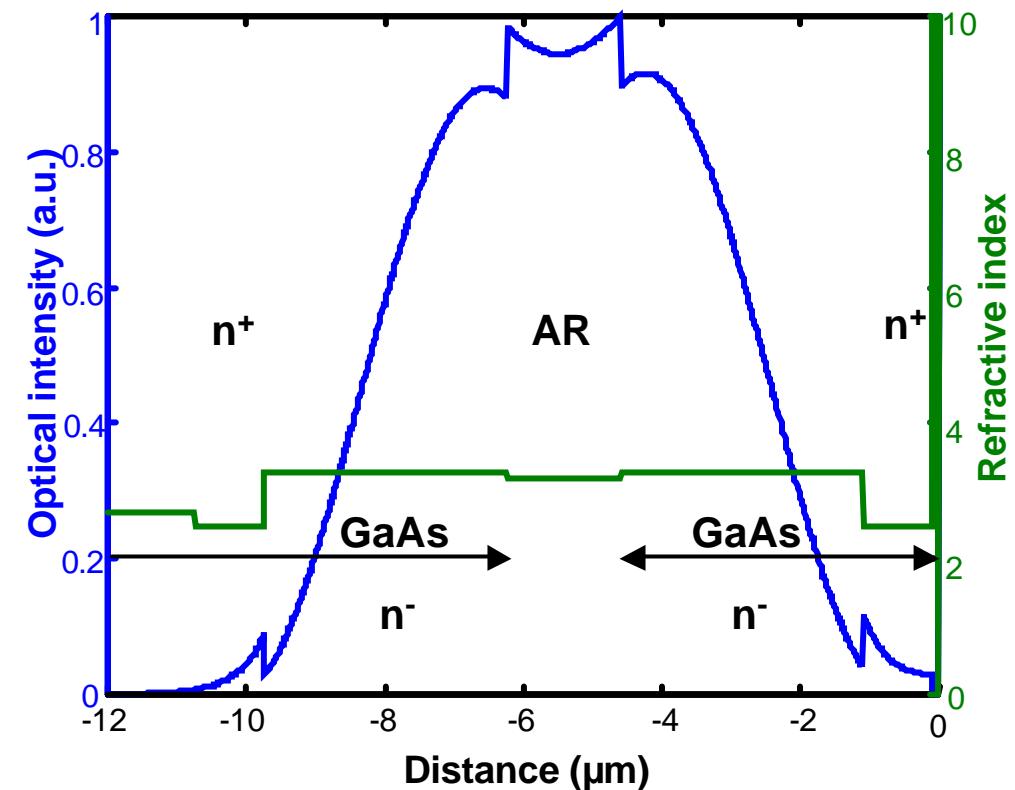

$c = 1.7$
 $J_{\text{th}} = 15 \text{kA/cm}^2$

→ Advantages

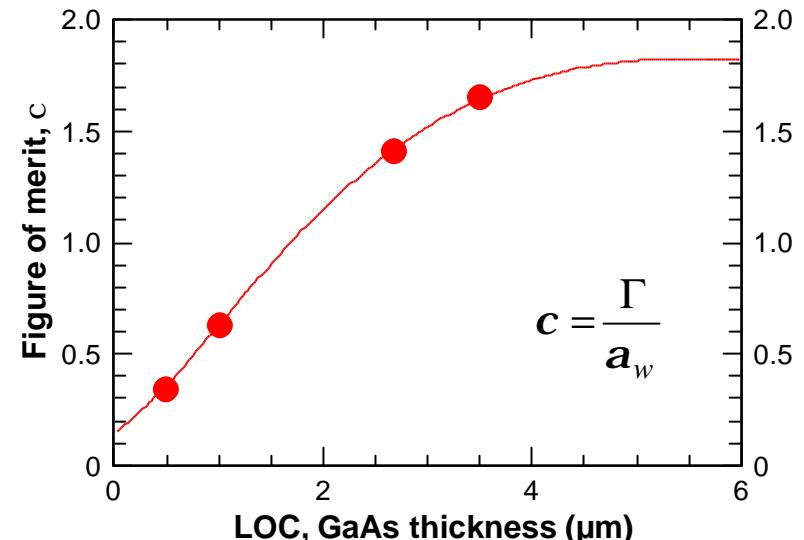

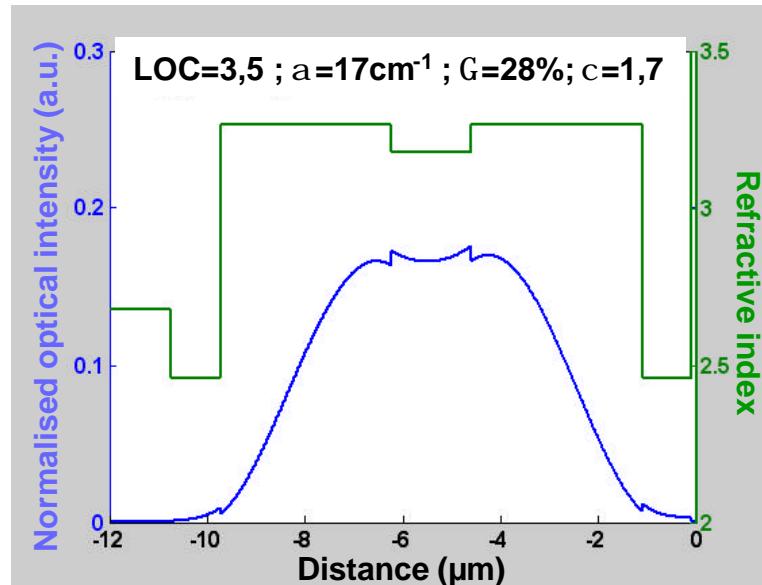

- straight-forward MBE growth
- good electrical characteristics

→ Drawbacks

- free carrier absorption (FCA) losses in highly doped layers

Current GaAs QCL waveguides (2)

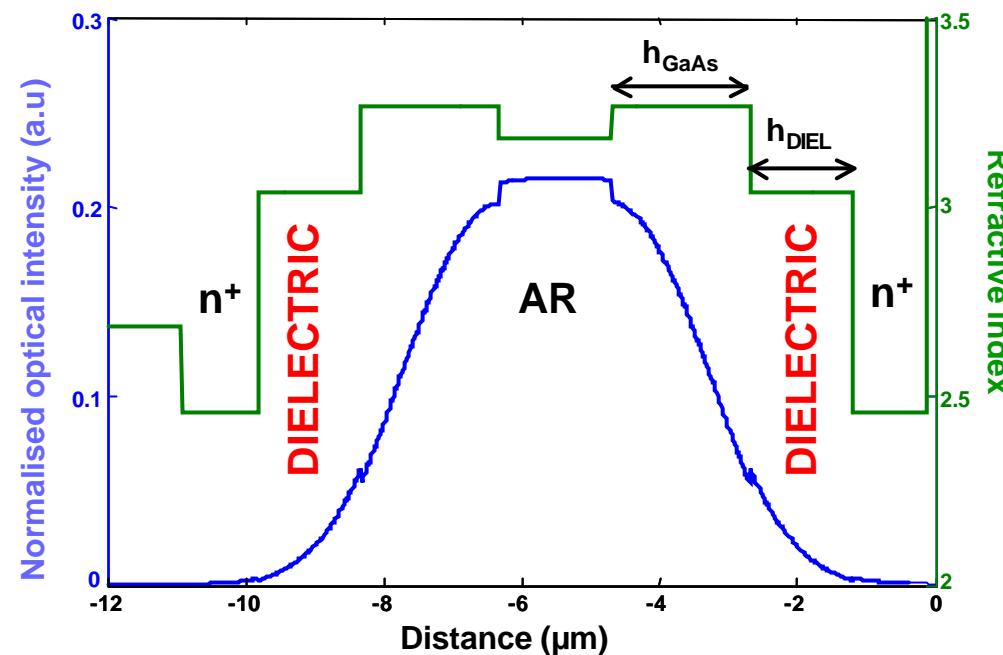

The χ optimisation is a trade-off between :

- Γ , decreasing with the GaAs thickness
- a , **mainly due to FCA**

Dielectric waveguide optimisation

NECESSITY TO REDUCE OPTICAL LOSSES FROM CLADDINGS

→ Plasmon enhanced waveguide strengthened by dielectric layers :

- AlGaAs layers
- GaInP layers

Maximum growth thickness $\sim 10\mu\text{m}$

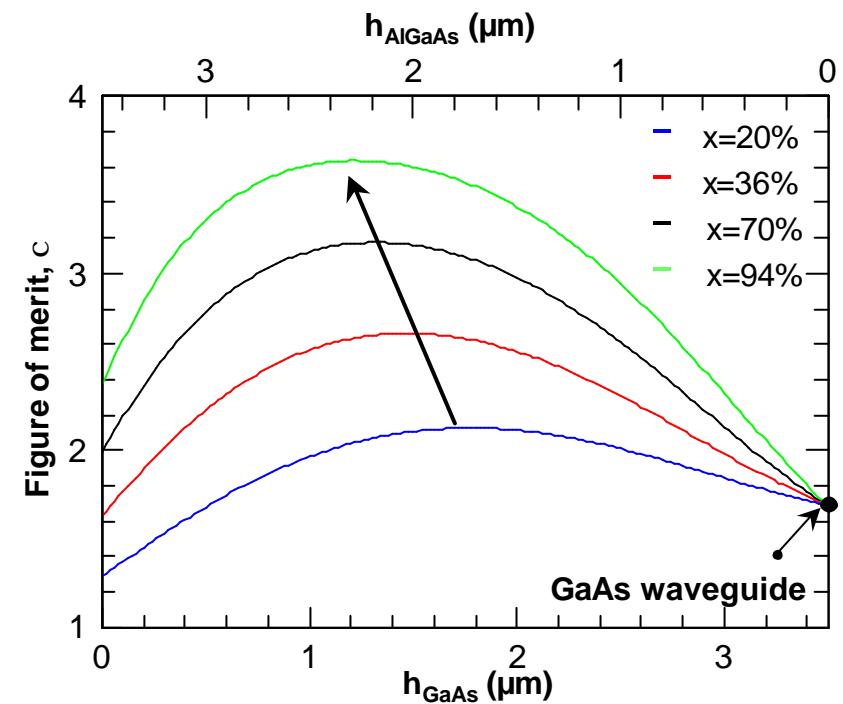

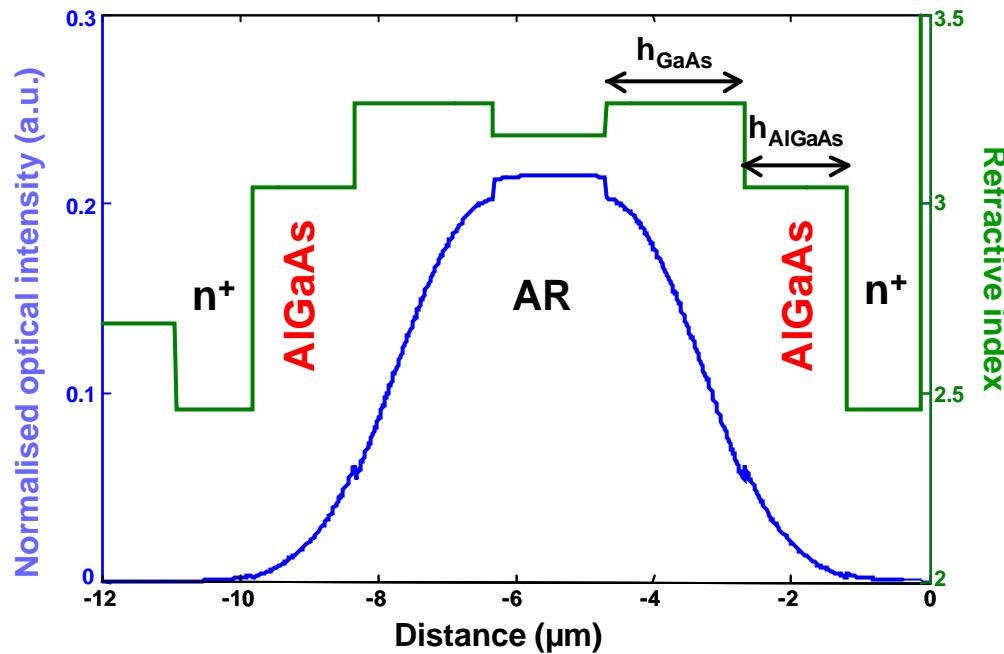

$$\rightarrow h_{\text{GaAs}} + h_{\text{Diel}} = 3,5\mu\text{m}$$

$\text{Al}_x\text{Ga}_{1-x}\text{As}$ cladding waveguides

With $x_{\text{Al}} \uparrow$:

- ▷ $\Delta n_{\text{GaAs/AlGaAs}} \uparrow \rightarrow \Gamma \uparrow$
- ▷ $\alpha \downarrow$ (mode overlap with highly doped layers reduced)

$$\left. \begin{array}{l} \\ \end{array} \right\} \quad \text{▷ } c = G/a \uparrow$$

$\text{Al}_x\text{Ga}_{1-x}\text{As}$ cladding waveguides

With $x_{\text{Al}} \uparrow$:

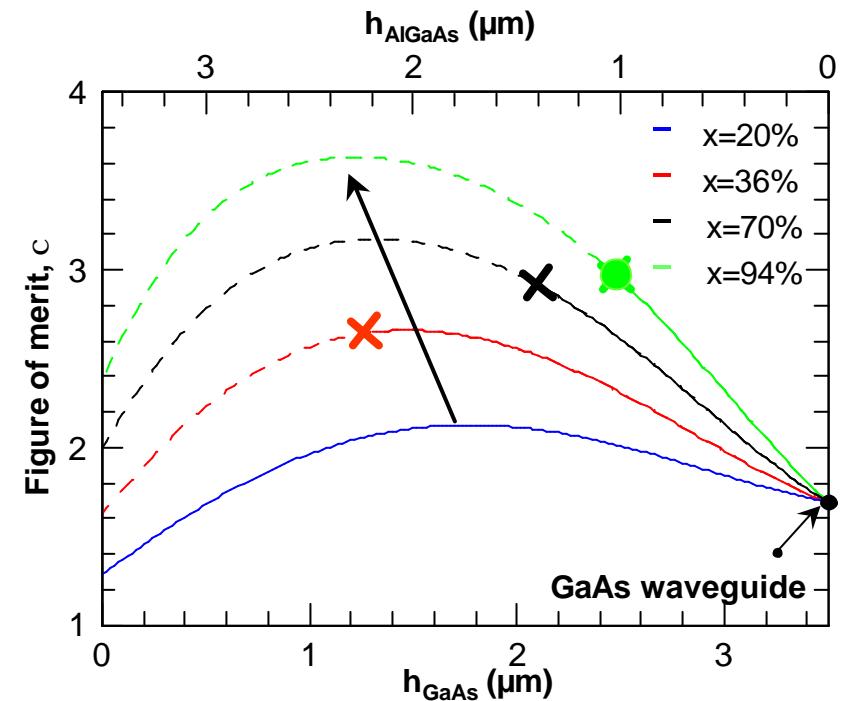

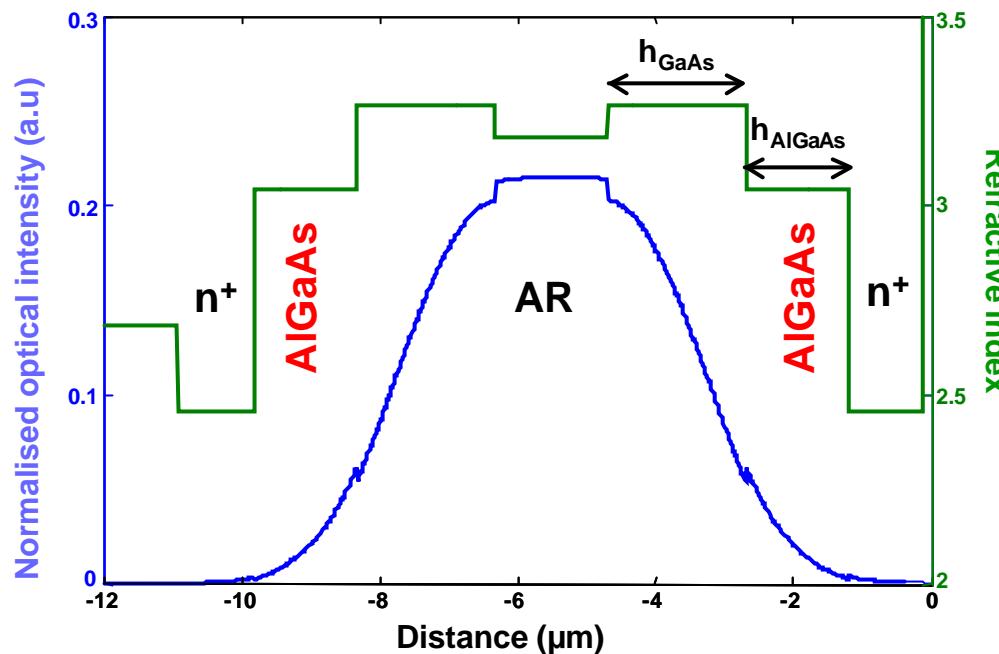

• $\Delta n_{\text{GaAs/AlGaAs}} \uparrow \rightarrow \Gamma \uparrow$

• $\alpha \downarrow$ (mode overlap with highly doped layers reduced)

• $c = G/a \uparrow$

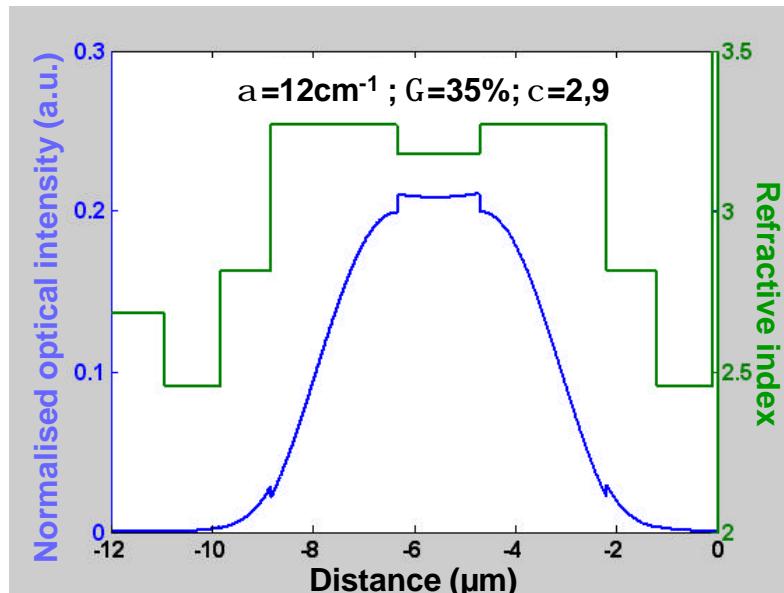

Limitations: lattice mismatch constraint $\rightarrow \text{Al}_x\text{Ga}_{1-x}\text{As}$ thickness limit $\sim 1/x_{\text{Al}}$

$\text{Al}_{0.94}\text{Ga}_{0.06}\text{As}$ cladding waveguides / QCL AL94

$\text{Al}_{0.94}\text{Ga}_{0.06}\text{As}$ cladding waveguide

$c=2.9$

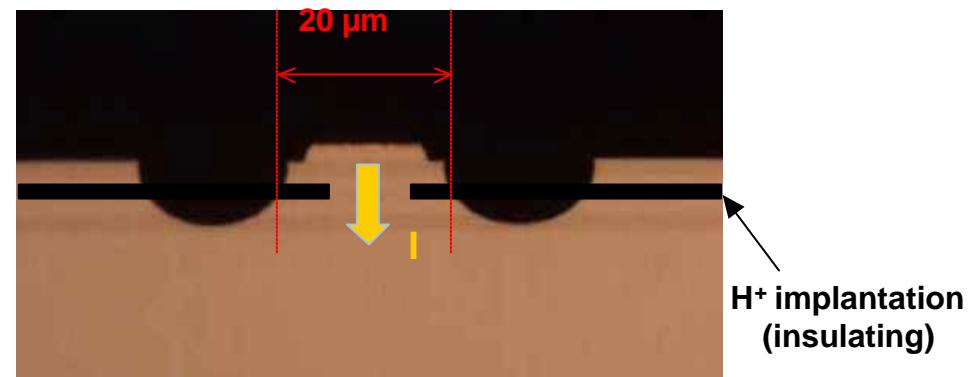

→ J_{th} ~2 times smaller than that of the GaAs plasmon enhanced waveguide.

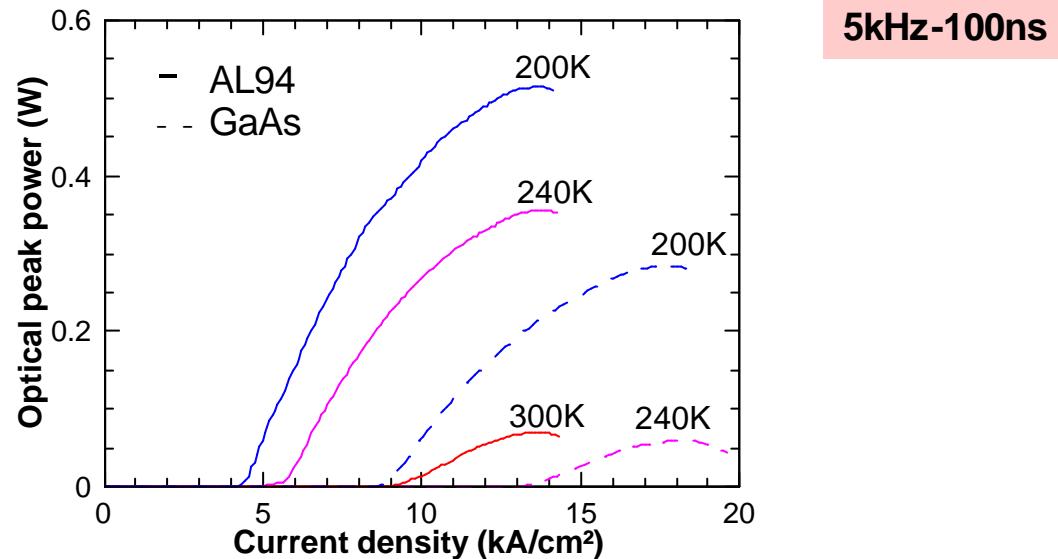

2 devices grown and processed identically:

→ GaAs : GaAs waveguide

→ AL94 : $\text{Al}_{0.94}\text{Ga}_{0.06}\text{As}$ waveguide

- Identical 3 quantum-well AR (same growth set)
- Double trench ridge devices
- H^+ implanted for selective current channelling
- Low duty cycle to avoid device heating

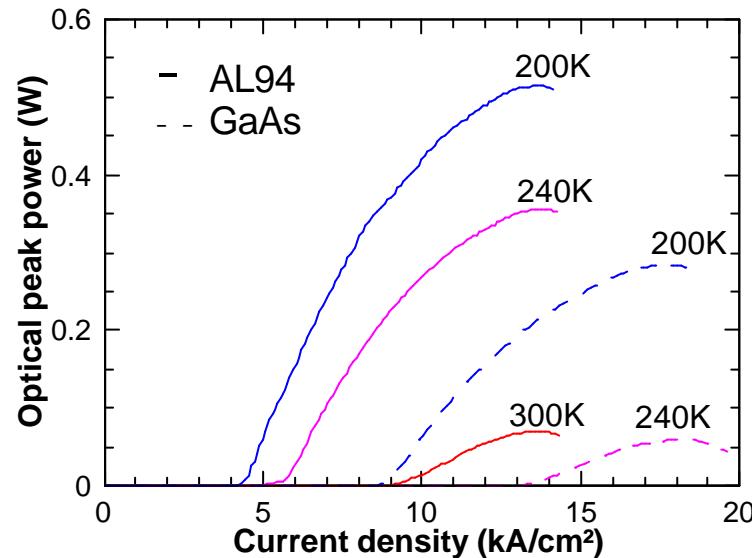

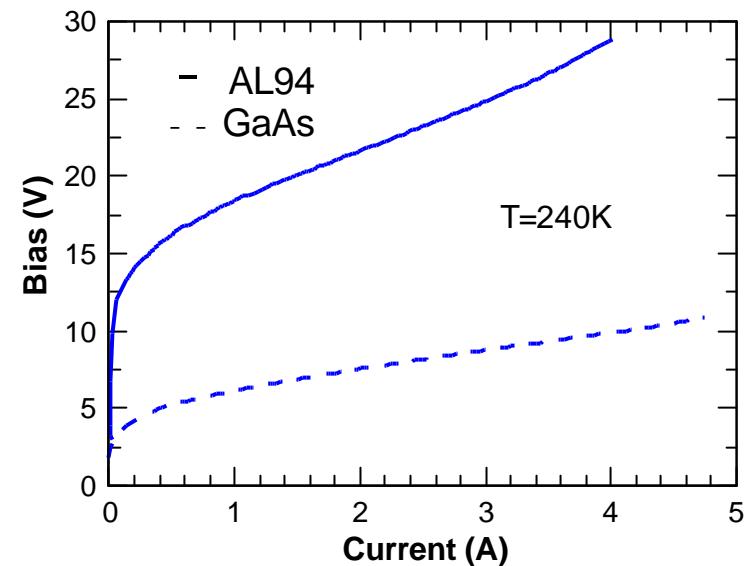

5kHz-100ns

Good optical performances for QCL AL94:

- Significant reduction of J_{th}
- Agreement with simulations:
 $J_{\text{th}}(\text{GaAs}) / J_{\text{th}}(\text{AL94}) @ c(\text{AL94}) / c(\text{GaAs}) @ 2$
- Higher optical peak power

5kHz-100ns

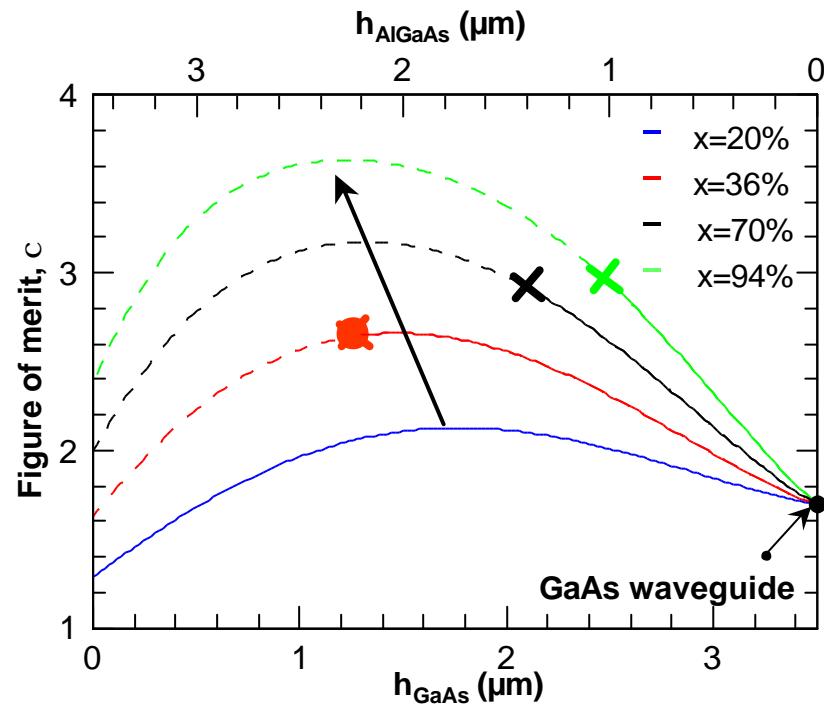

Good optical performances for QCL AL94:

- Significant reduction of J_{th}
- Agreement with simulations:
 $J_{th}(\text{GaAs}) / J_{th}(\text{AL94}) @ c(\text{AL94}) / c(\text{GaAs}) @ 2$
- Higher optical peak power
- 300K operation

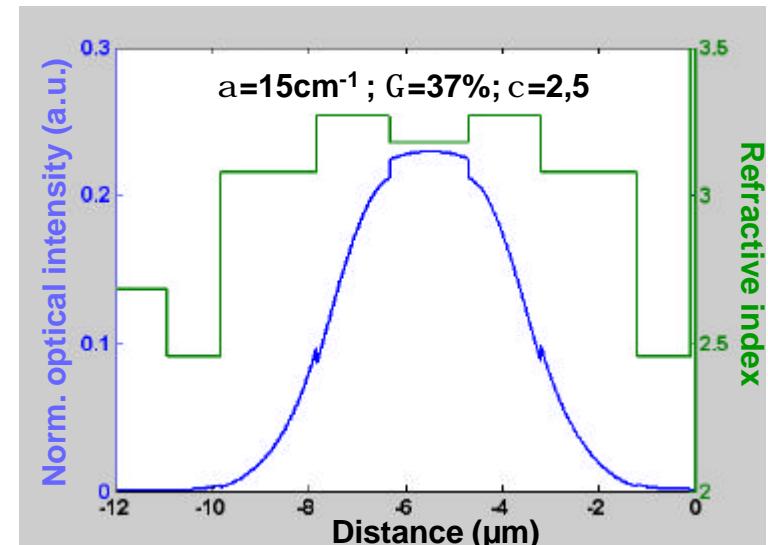

Poor electrical characteristics for QCL AL94:

- Abnormally high knee: $V_c=14V$ ($V_c(\text{GaAs})=5V$)
Bad ohmic contacts?
- *Bad grading between GaAs and AlGaAs layers?*
- Higher differential resistances
3x higher for AL94 device compared to GaAs QCL
- High operating voltage

$\text{Al}_{0.36}\text{Ga}_{0.64}\text{As}$ cladding waveguides

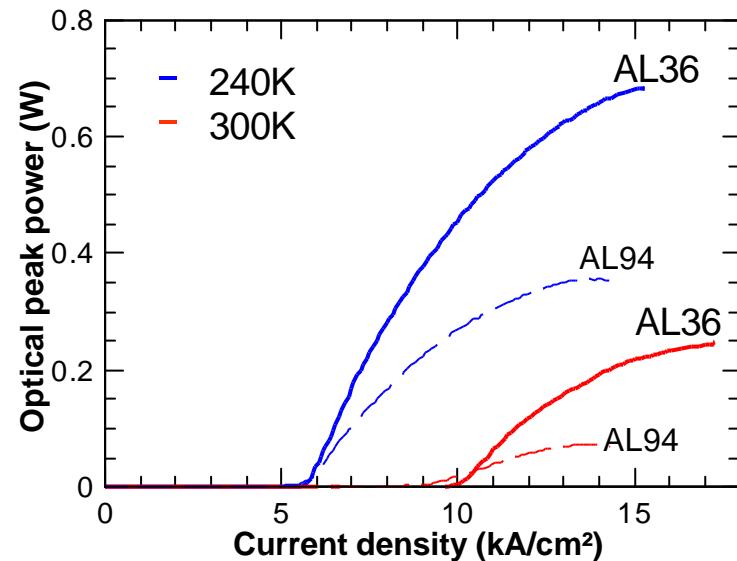

$\text{Al}_{0.36}\text{Ga}_{0.64}\text{As}$ cladding waveguide

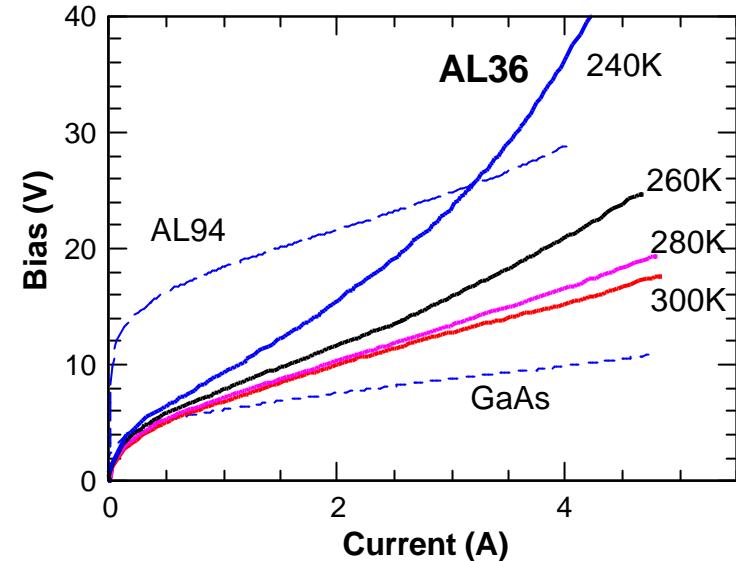

$c=2,5$

Electrical conductivity better
than $\text{Al}_{0.94}\text{Ga}_{0.06}\text{As}$ layers:
better e⁻ mobility
lower effective mass

5kHz-100ns

Good optical performances for QCL AL36:

- J_{th} significantly lower than $J_{th}(\text{GaAs})$
- J_{th} slightly higher than $J_{th}(\text{AL94})$
- Higher optical peak power

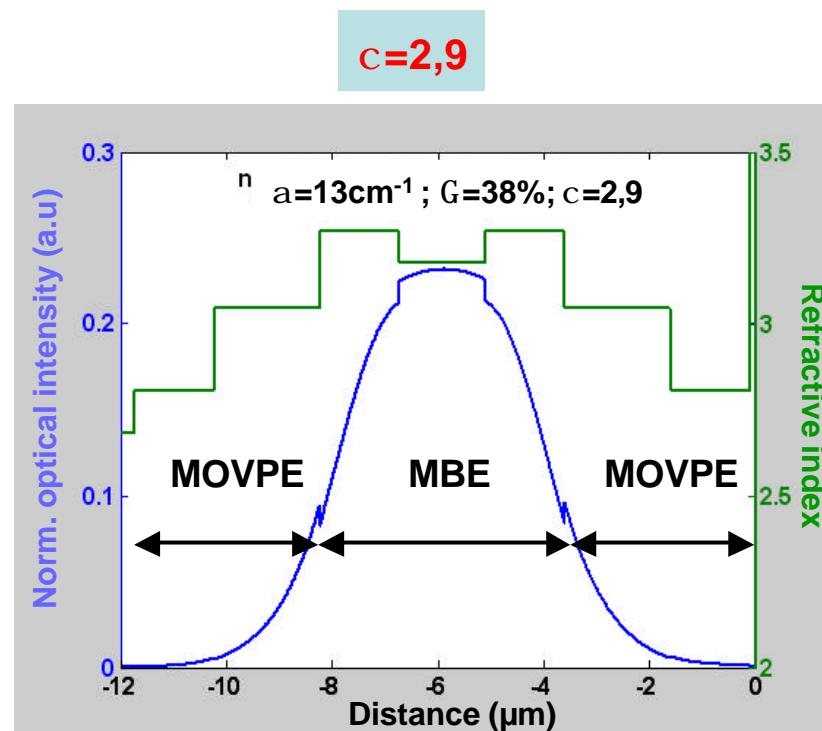

$$P_{max}(\text{AL36})=250 \text{ mW at } 300\text{K}$$

Electrical characteristics dependant on the temperature:

- Higher differential resistances
- $dV/dI = f(T)$ for AL36 QCL: $E_{act}=132\text{meV}$
- High operating voltage for $T < 260\text{K}$

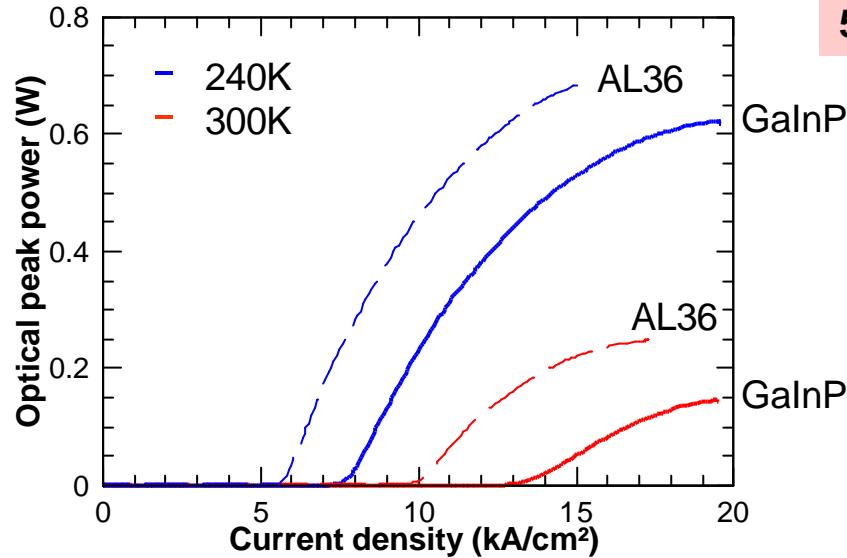

$\text{Ga}_{0.51}\text{In}_{0.49}\text{P}$ cladding waveguides

- **$\text{Ga}_{0.51}\text{In}_{0.49}\text{P}$ refractive index @ $\text{Al}_{0.45}\text{Ga}_{0.55}\text{As}$ refractive index**
 - ➔ Good $\Delta n_{\text{GaAs/GaInP}}$ for improved confinement: $c=2,9$
- **Good electrical conductivity**
- **$\text{Ga}_{0.51}\text{In}_{0.49}\text{P}$: lattice matched to GaAs**
 - ➔ no thickness limitation

Drawback : $\text{Ga}_{0.51}\text{In}_{0.49}\text{P}$ re-growth
by MOVPE at Thales

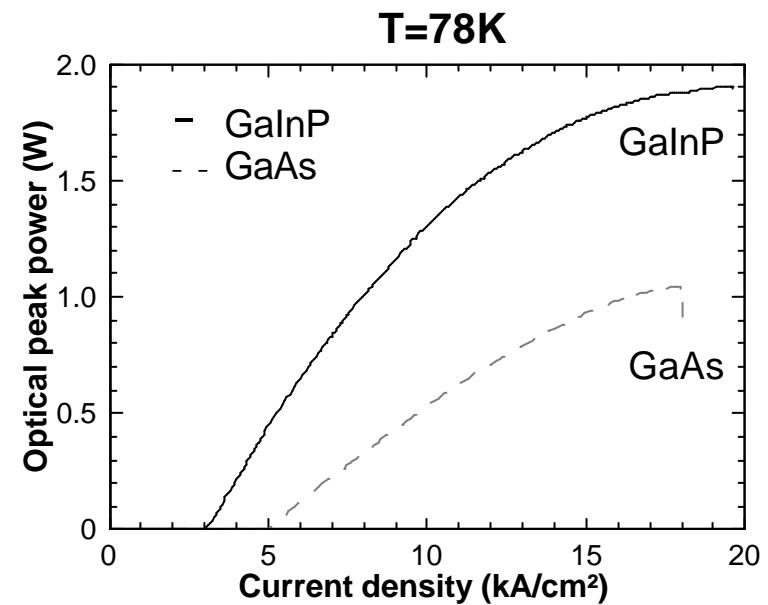

➔ growth in 3 steps

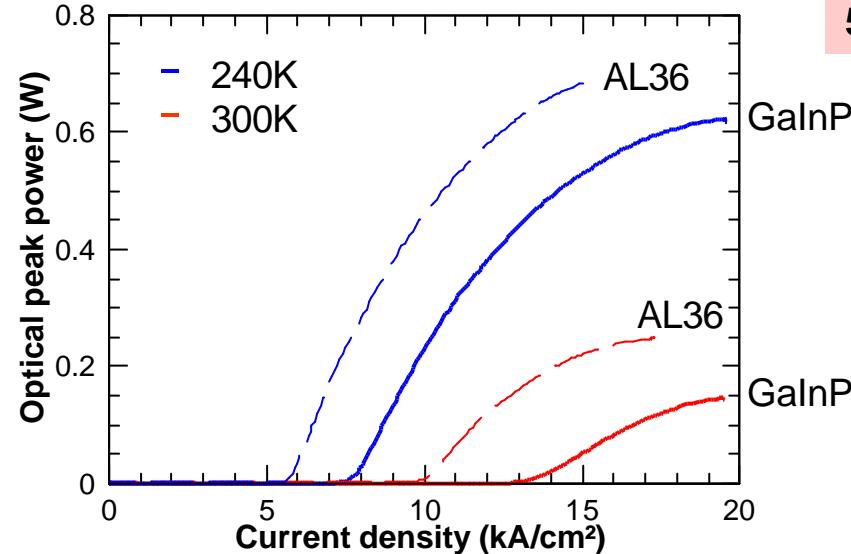

5kHz-100ns

Good optical performances for QCL AL36:

- J_{th} significantly lower than $J_{th}(\text{GaAs})$
- $J_{th}(\text{GaInP})$ higher than $J_{th}(\text{AL36})$
- High optical peak power at 78K
 $P_{max}(\text{GaInP})=1,9\text{W at }78\text{K}$
- Optical peak lower than QCL AL36 at RT
 $P_{max}(\text{GaInP})=150\text{ mW at }300\text{K}$

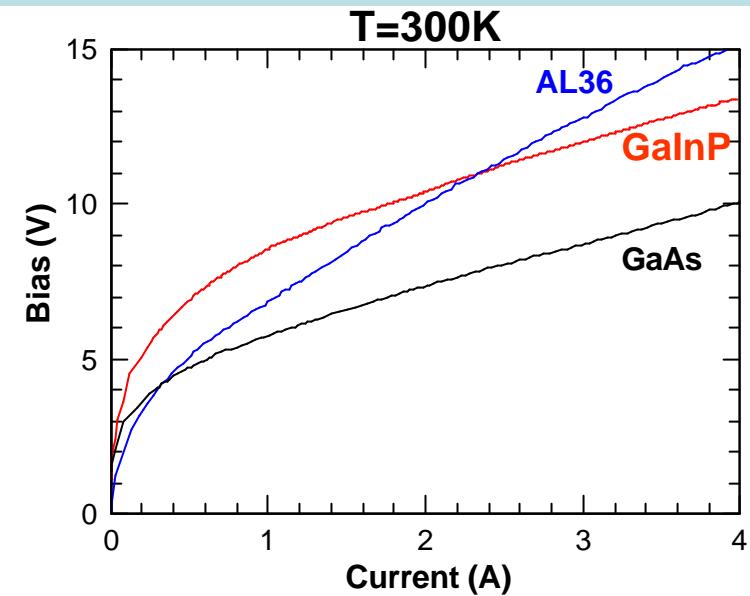

5kHz-100ns

GaN_P

AL36
GaN_P

QCL GaInP

Good optical performances for QCL AL36:

- J_{th} significantly lower than $J_{th}(\text{GaAs})$
- $J_{th}(\text{GaInP})$ higher than $J_{th}(\text{AL36})$
- High optical peak power at 78K

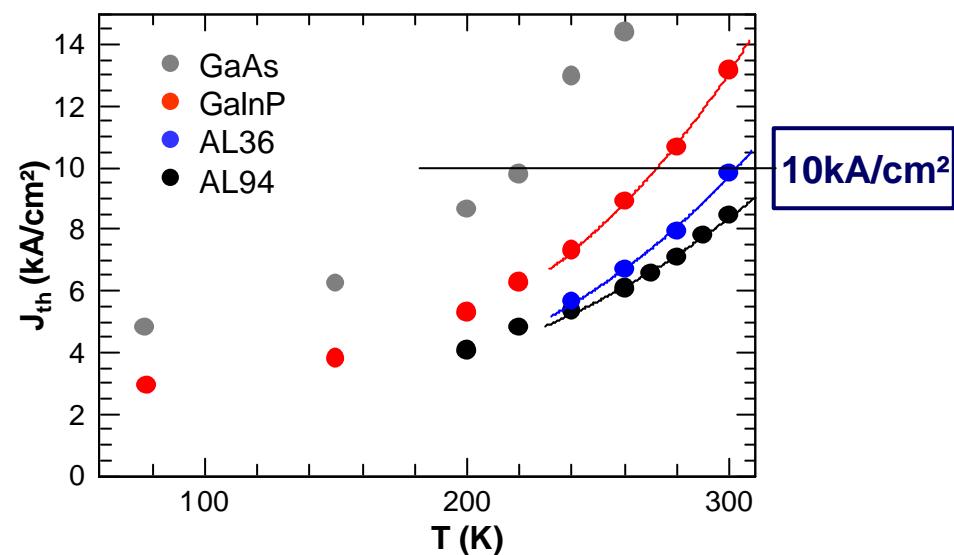

$$P_{max}(\text{GaInP}) = 1.9 \text{ W at } 78\text{K}$$

- Optical peak lower than QCL AL36 at RT

$$P_{max}(\text{GaInP}) = 150 \text{ mW at } 300\text{K}$$

Electrical characteristics :

- Higher knee bias: $V_c = 7\text{V}$ ($V_c(\text{GaAs}) = 5\text{V}$)
- Lower differential resistance than AL36
- Higher operating voltage than GaAs

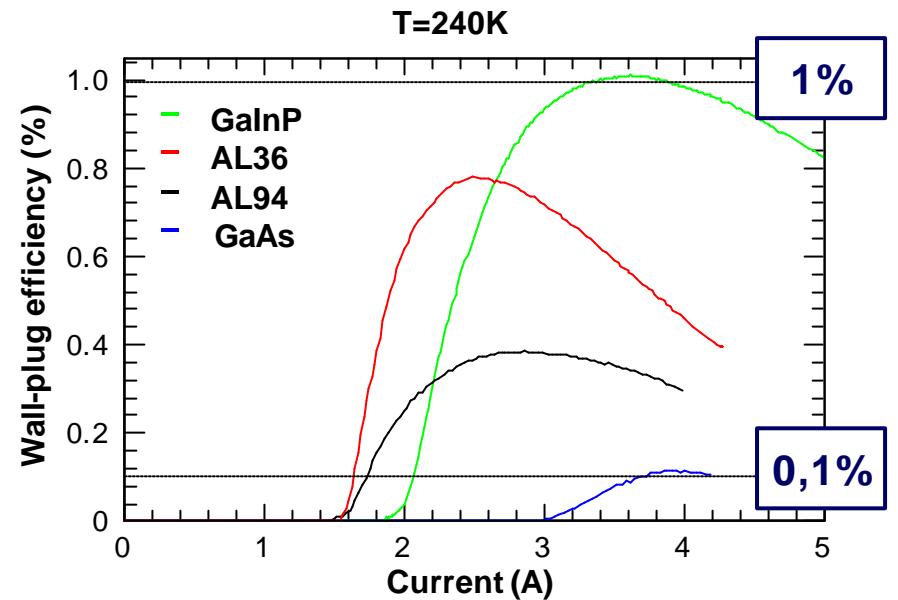

Reduction of threshold current densities:

- Low J_{th}
- Agreement with our predictions for AL94 and AL36:

$$J_{th}(\text{GaAs}) / J_{th}(\text{Diel.}) @ c(\text{Diel.}) / c(\text{GaAs})$$

Best waveguide device :
QCL AL36

Summary of laser performances

Better Wall-Plug efficiencies than LCQ GaAs

→ WP(GaInP)=1% = 10xWP(GaAs) at 240K

Optical performances improvements

Electrical degradations

Best QCLs :
QCL AL36 for $T > 250$ K
QCL GaInP for $T < 250$ K

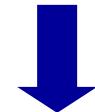

Waveguide loss measurements

Waveguide losses a_w determined from $J_{th}=f(a_m)$ plot:

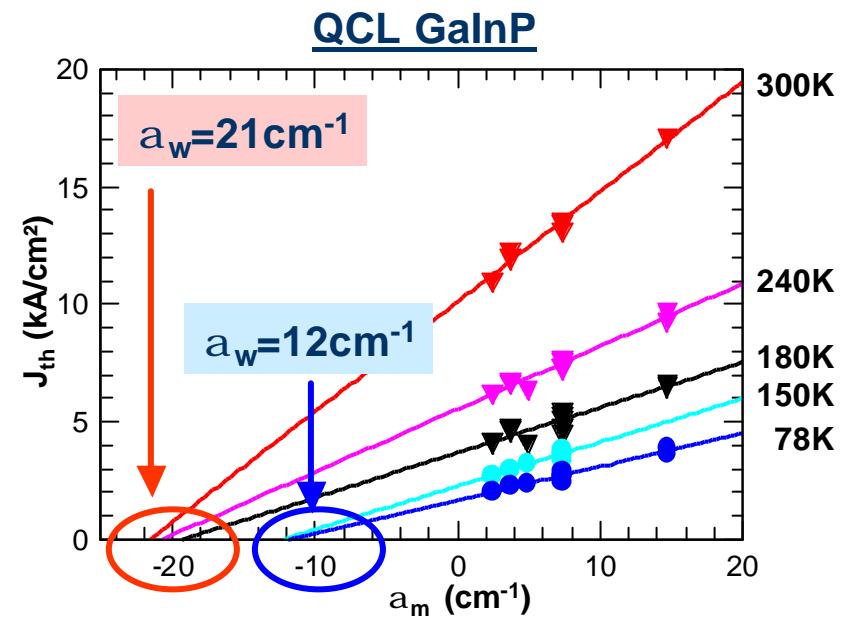

$$J_{th} = (a_m + a_w) / gG$$

	a_w	
	$T < 180K$	$T \geq 180K$
AL36	-	19 cm^{-1}
GaN/P	12 cm^{-1}	21 cm^{-1}
GaAs	20 cm^{-1}	-

$\rightarrow a_w$ increase at $T \geq 180K$

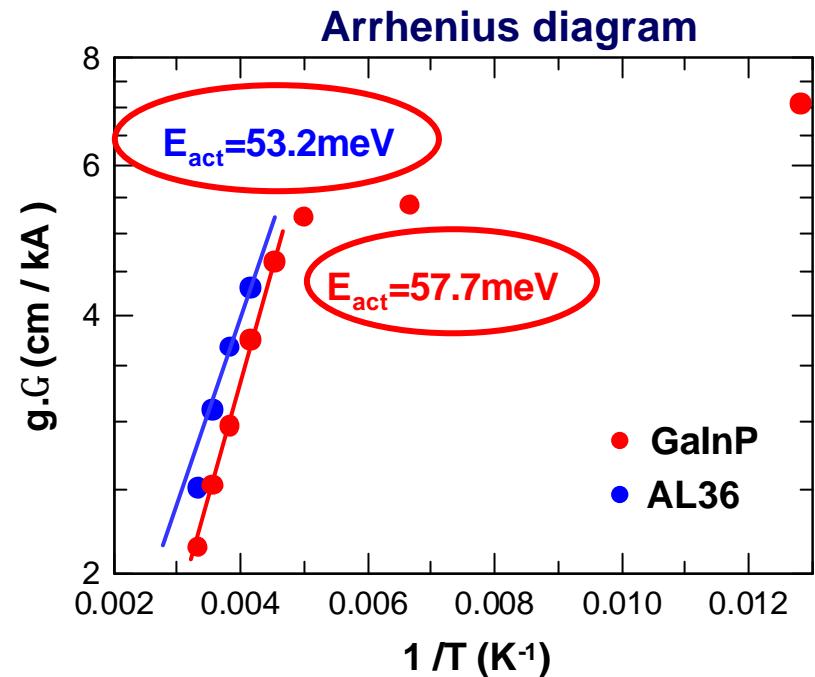

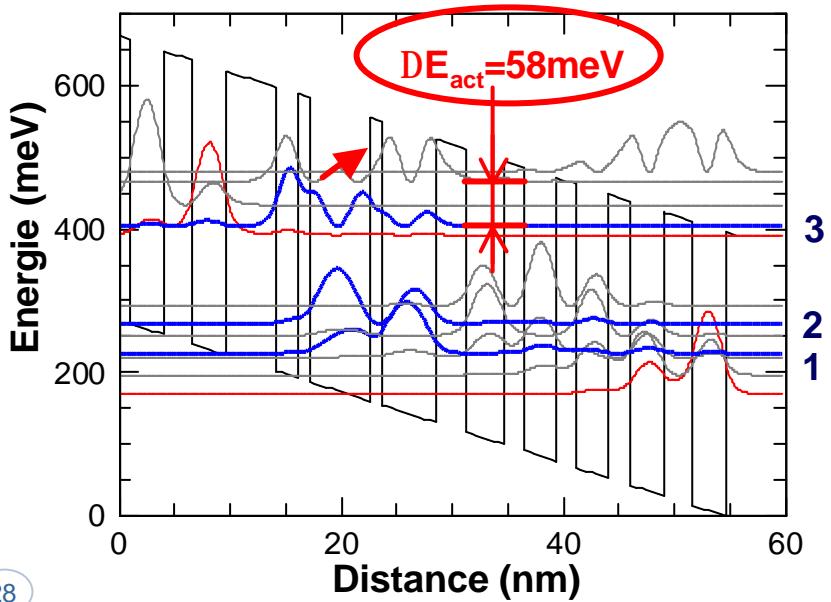

Reduction of a_w at low temperature compared to QCL GaAs

$J_{th} = f(a_m)$ plot $\Rightarrow gG = f(T)$

→ Observation of 2 operating regimes

Carrier leakage into the continuum ?

→ Carrier leakage into the continuum

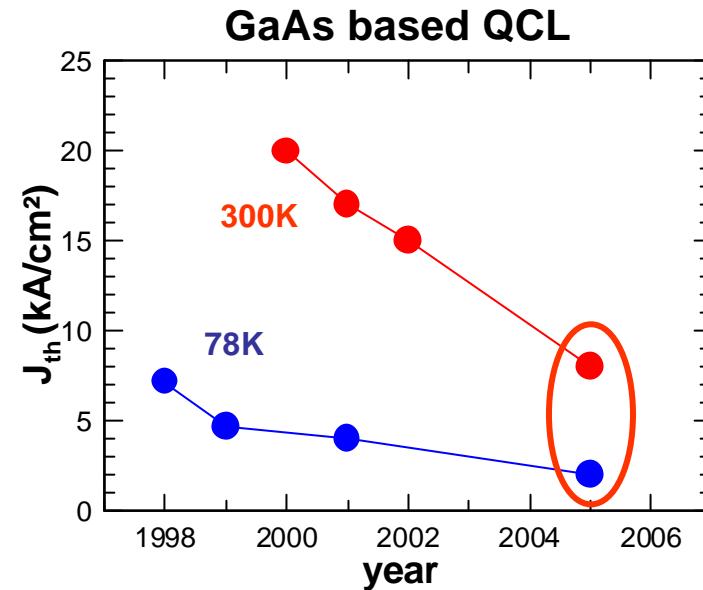

Limitation of the conduction band discontinuity of GaAs/AlGaAs for room temperature operation

Waveguide study conclusion

- Significant reduction of J_{th}
- Best performances (J_{th} , P_{max}) on GaAs-based QCLs

Application of these waveguides on a bound-to-continuum AR QCL

- Degradation of the electrical transport
- Limitation from the conduction band discontinuity of GaAs/AlGaAs underlined for room temperature operation
- High optical losses at Room Temperature

1. Introduction

2. Waveguide Optimisation in GaAs/AlGaAs QCLs

GaAs based guides (plasmon enhanced) / Limitations
AlGaAs and GaInP Guides

3. Enhancement of thermal dissipation properties of GaInAs/AlInAs/InP QCLs

Selective current injection by proton implantation
Thick electro-plated gold

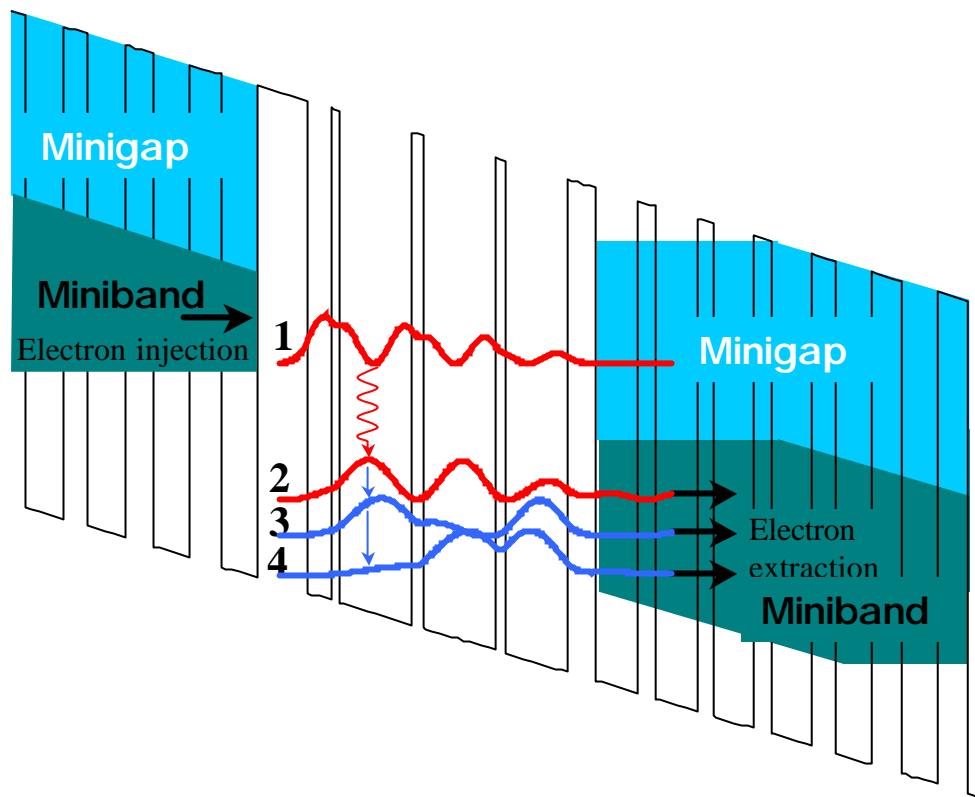

4. Conclusion

Application to InP-based QCLs

Active Region:

1 ~9 μ m

4 Quantum Wells

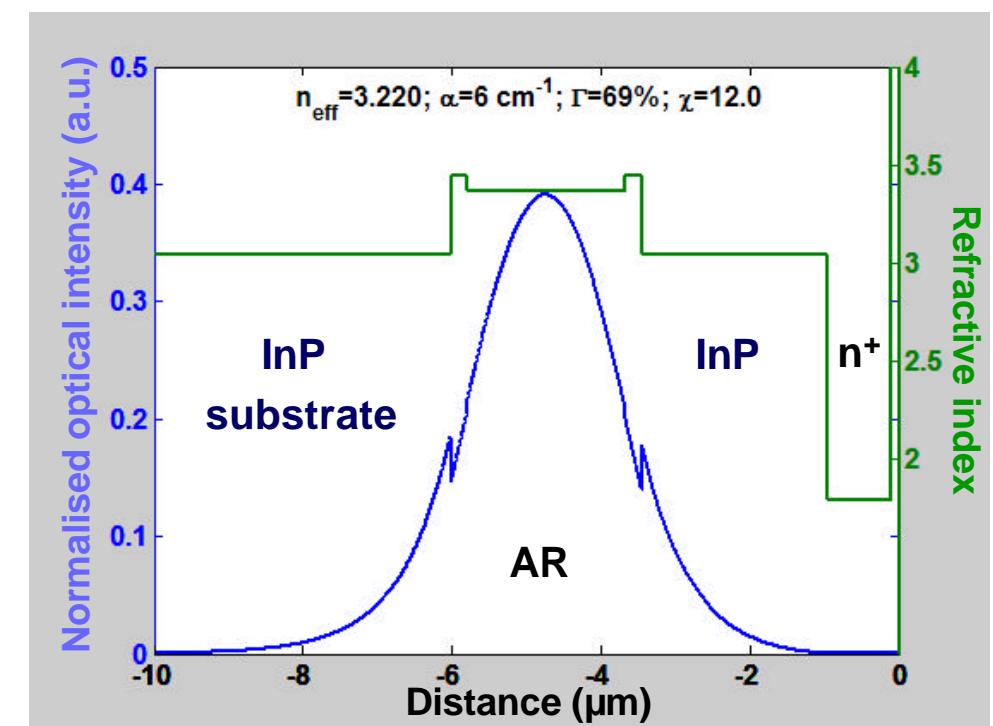

Vertical Waveguide Structure:

c~12

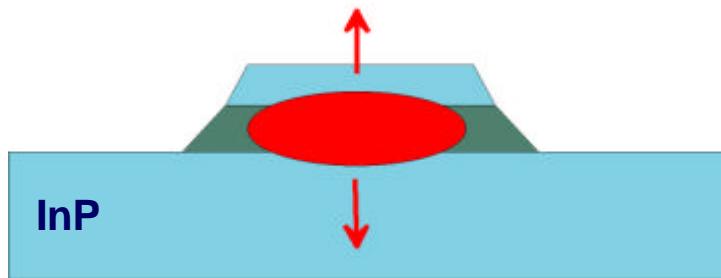

G~69%

a~6 cm $^{-1}$

Heat management in QCLs

Standard ridge waveguide

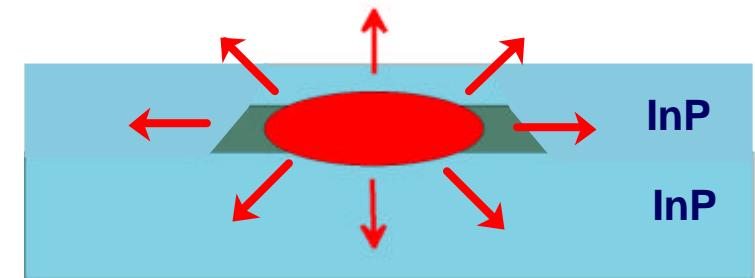

No lateral heat dissipation

InP based QCLs

Buried heterostructure

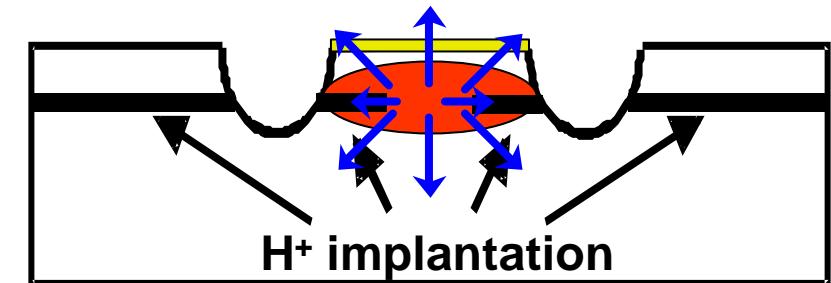

Good lateral heat flow

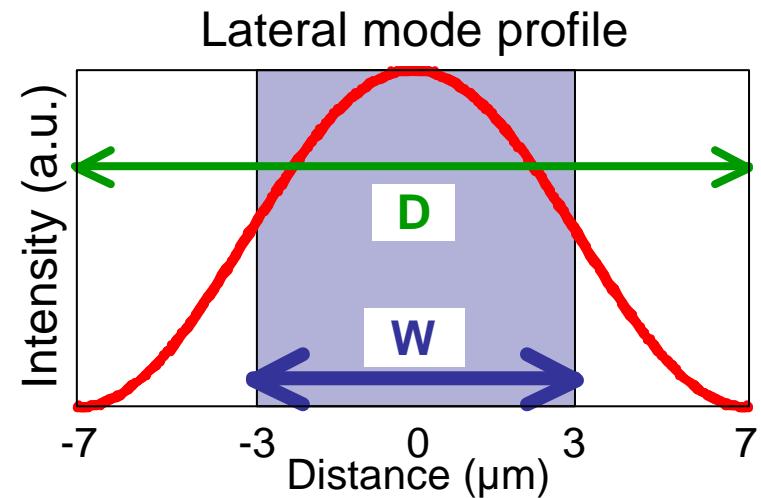

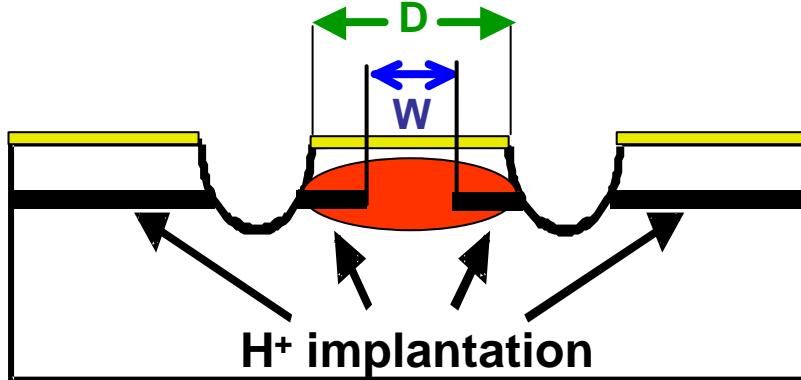

GaAs based QCLs

Selective current injection

Selective current injection

Semi-insulating layers using proton implantation

→ decrease electrically pumped area

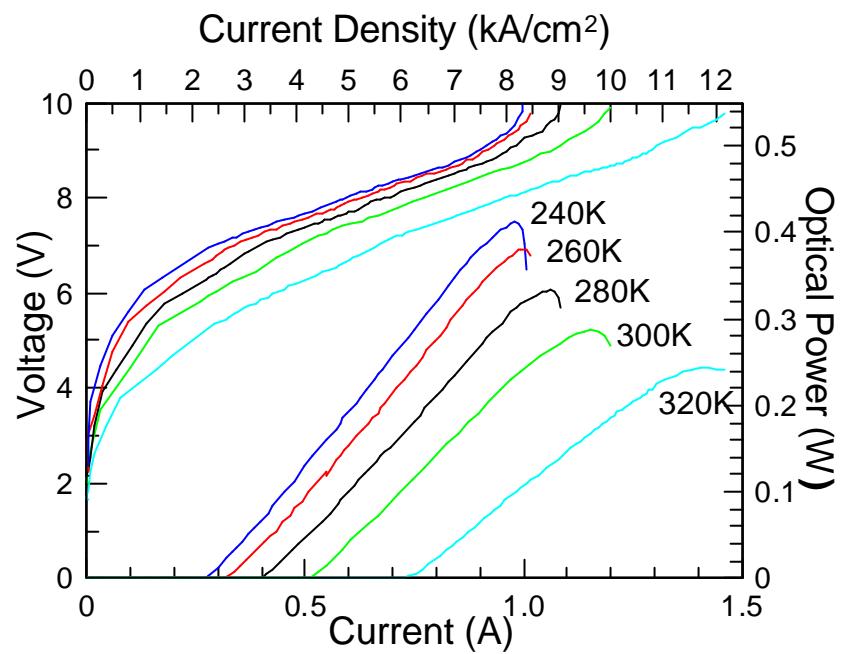

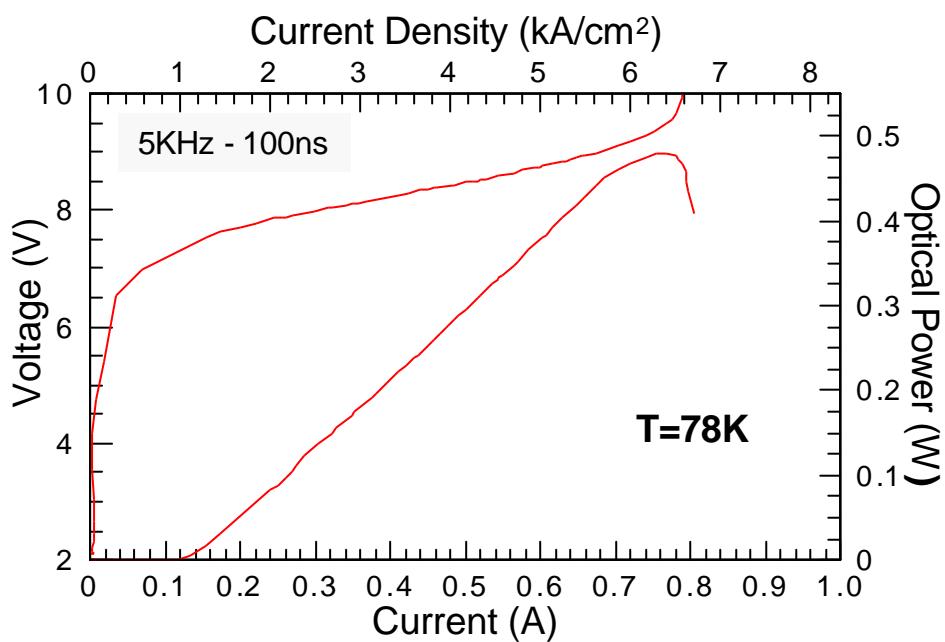

For $\frac{W}{D} = \frac{6}{14} \approx 0,5$

- ▶ Pumped area (A) ↘ : -50%
- ▶ Mode overlap (Γ) ↘ : -20%
- ▶ $J_{\text{th}} \propto 1/\Gamma$ ↗ : +20%
- ▶ $I_{\text{th}} = J_{\text{th}} \times A$ ↘ : -40%

Decrease of injected electrical power

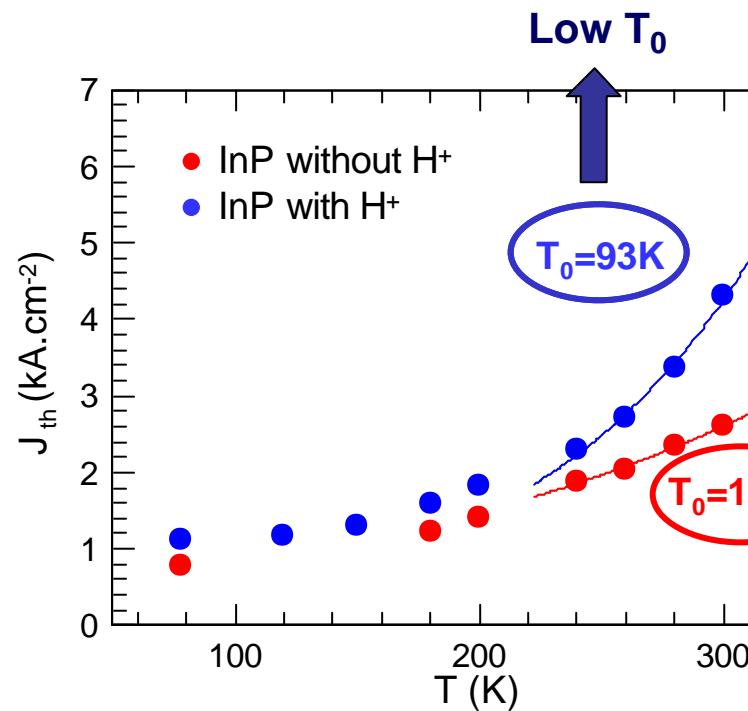

Selective current injection in InP QCLs: L-I-V pulsed characteristics

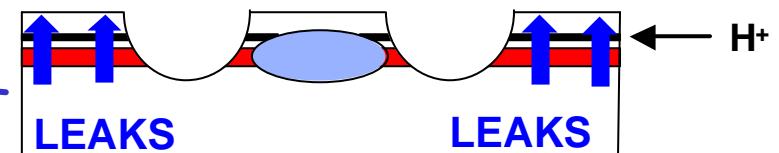

→ @78K: $I_{\text{th}}=135 \text{ mA}$, $J_{\text{th}}=1,1 \text{ kA}/\text{cm}^2$

→ @300K: $I_{\text{th}}=500 \text{ mA}$, $J_{\text{th}}=4,3 \text{ kA}/\text{cm}^2$

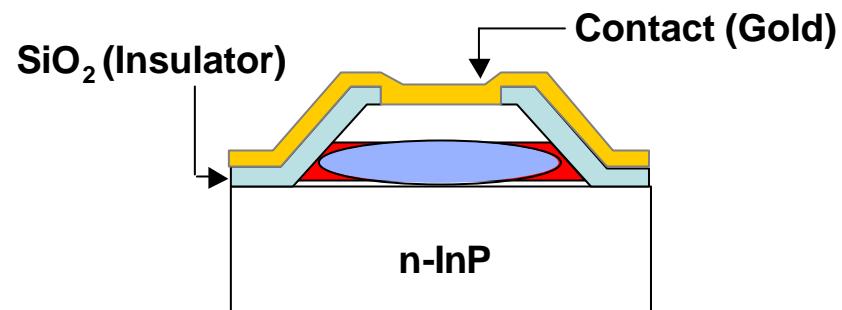

Abnormally high increase of I_{th} with temperature

Implanted structure

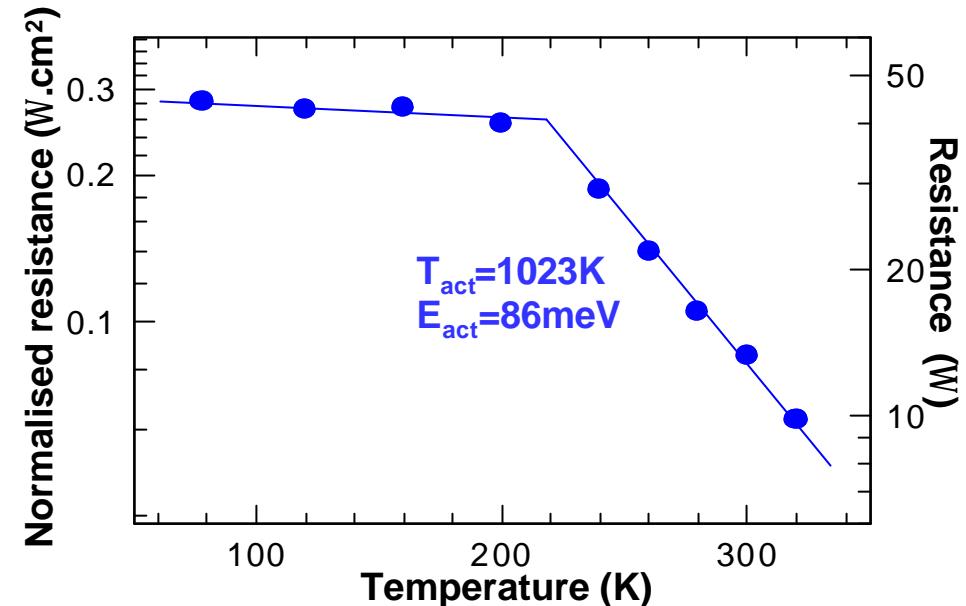

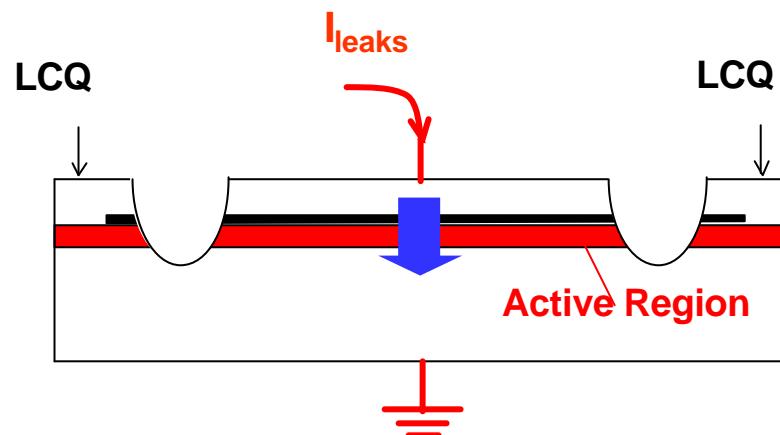

Standard ridge waveguide

T_0 : Characteristic temperature
from fit : $J_{th} = J_{th0} \cdot \exp(T/T_0)$

Current leakage – implantation breakdown

H⁺ implantation creates shallow defects in n-doped InP material

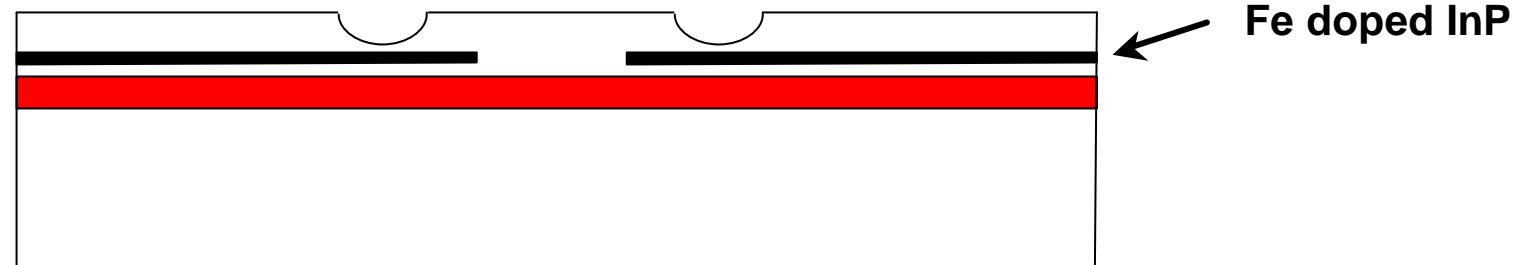

Selective current injection for InP-based QCLs ?

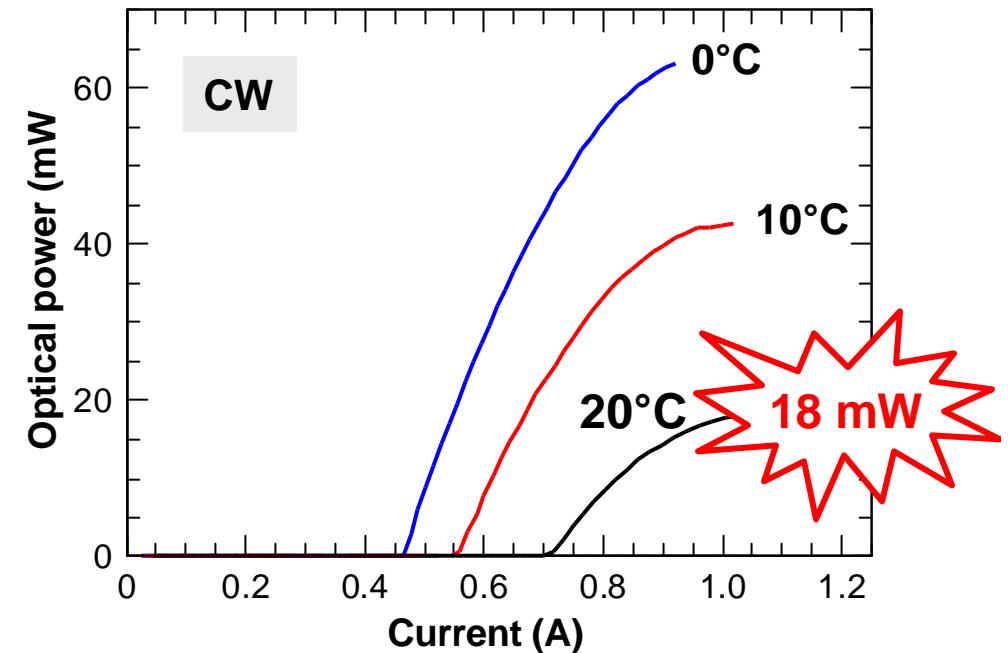

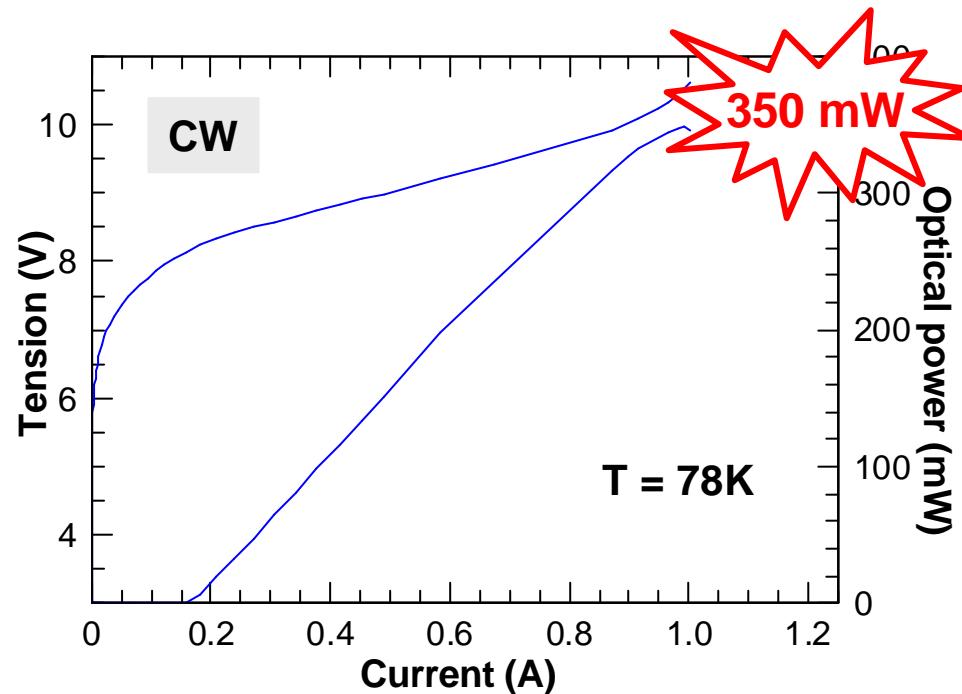

→ Selective current injection by H⁺ implantation inefficient in InP-based QCLs

→ Future : use of Fe-doped InP as insulating layer

- Deep defects in InP bandgap
- Fe cannot be deeply implanted → growth of Fe-doped InP layer

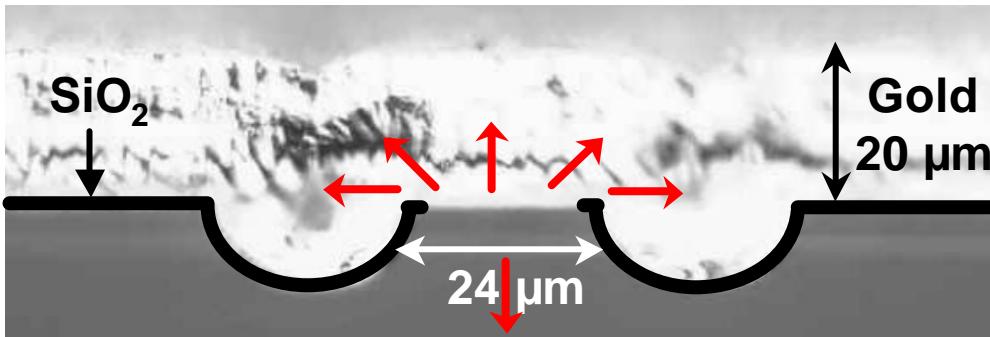

CW operation for H⁺ implanted InP-based QCLs

**High Temperature CW operation
even with current leakage**

Electroplated Gold (Au) devices

Electroplated Au Device

→ Very good heat dissipation device

Best performances obtained on QCLs
with this type of device

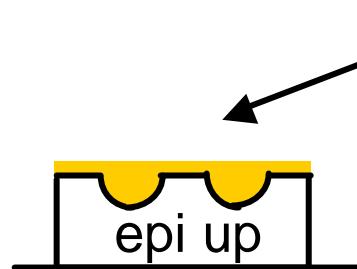

Slivken et al, APL (2004)

4 experimental arrangements:

Without Au

L1

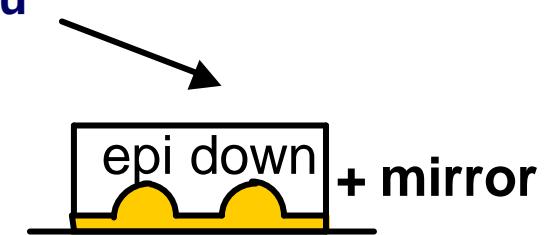

L2

With electroplated Au

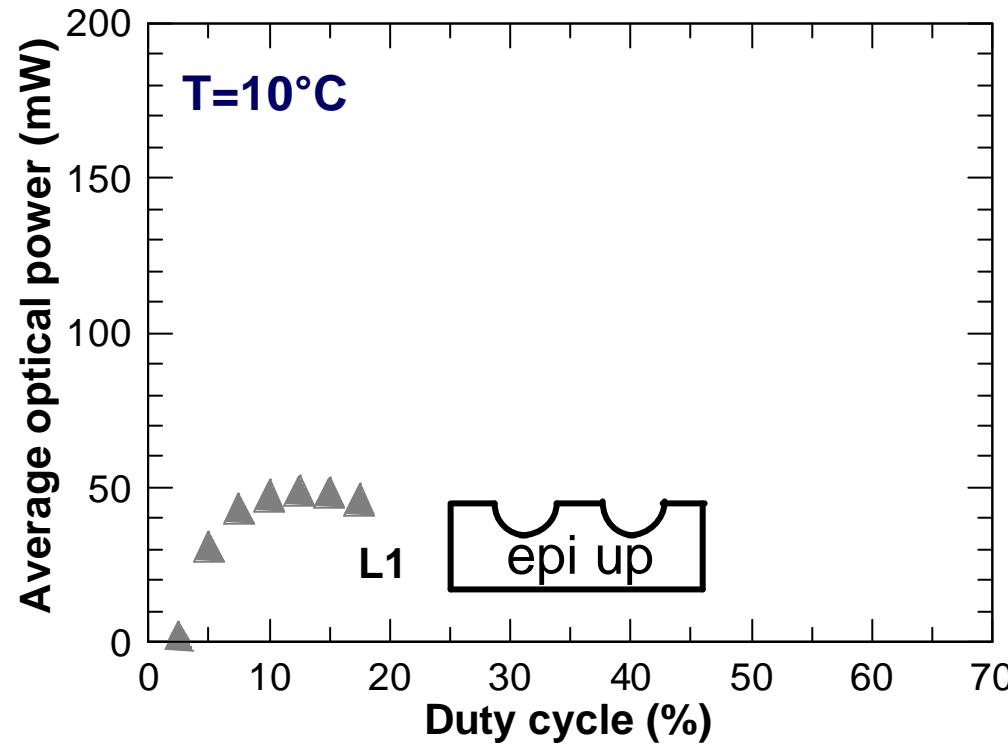

L3

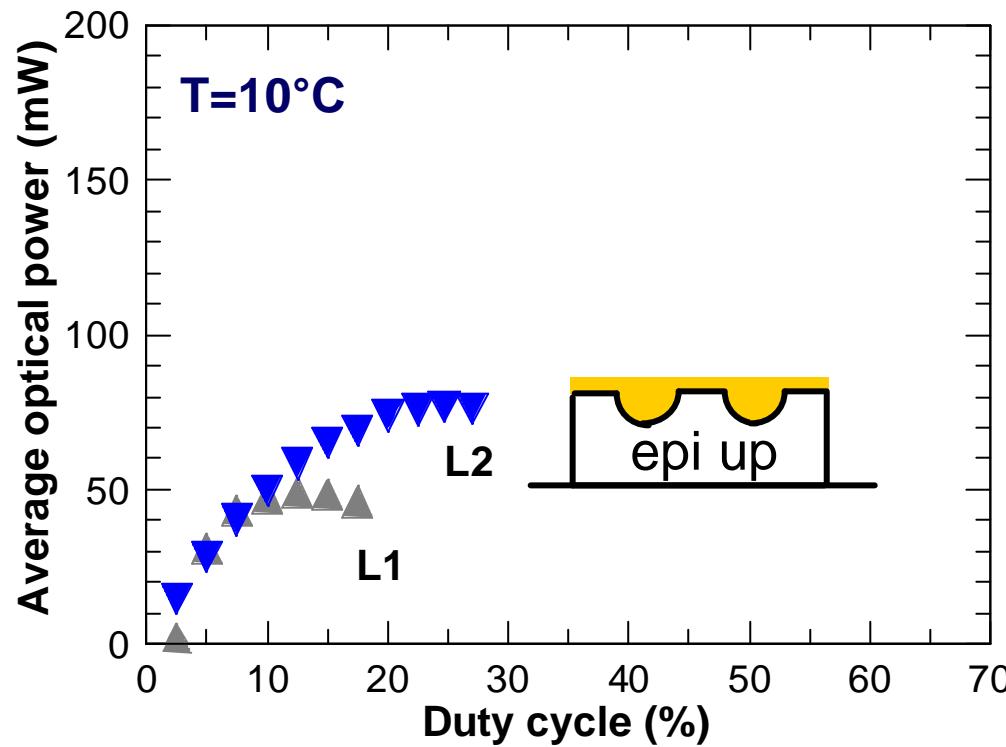

L4

Effect of Thick electroplated Au

$L1 \rightarrow P_{\max} = 49\text{mW}$ for DC=12%

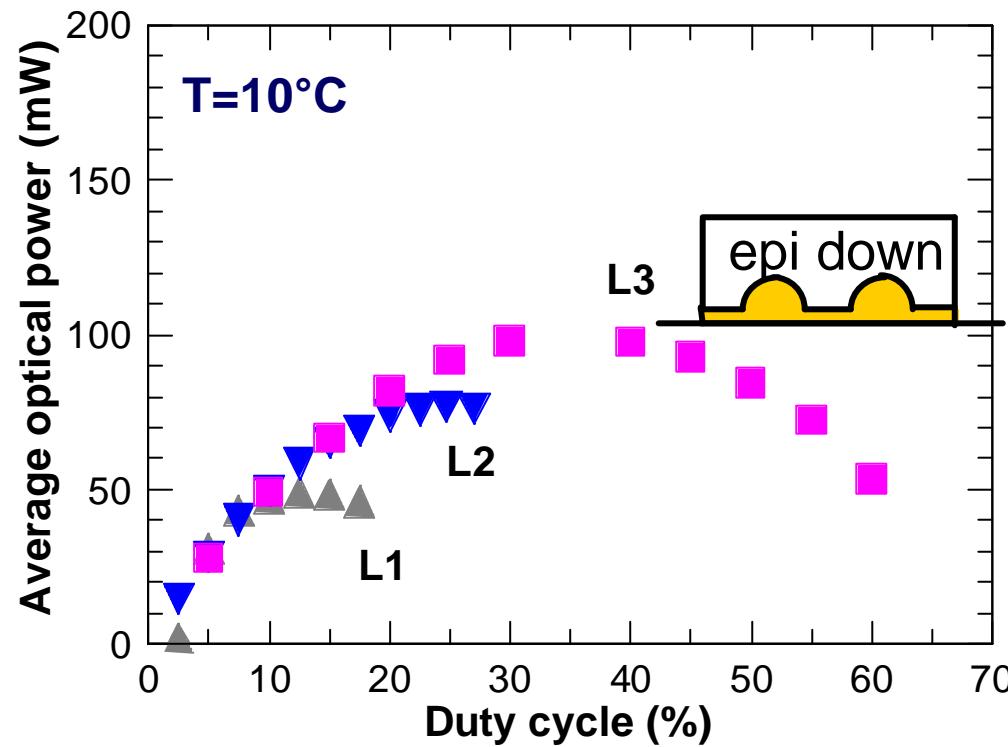

Effect of Thick electroplated Au

$L1 \rightarrow P_{\max} = 49\text{mW}$ for DC=12%

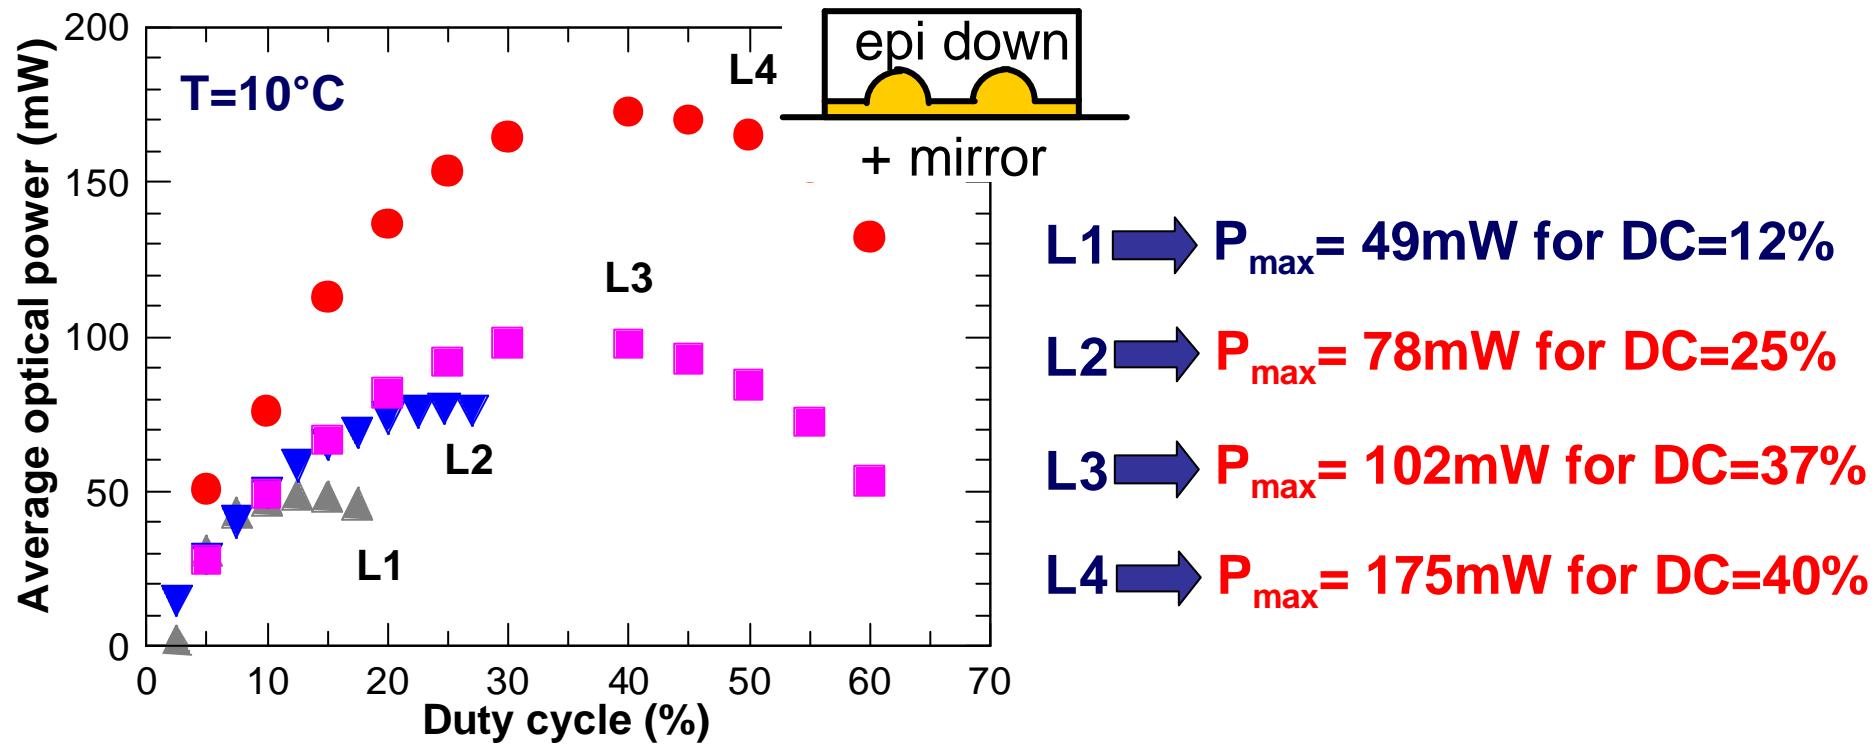

$L2 \rightarrow P_{\max} = 78\text{mW}$ for DC=25%

Effect of Thick electroplated Au

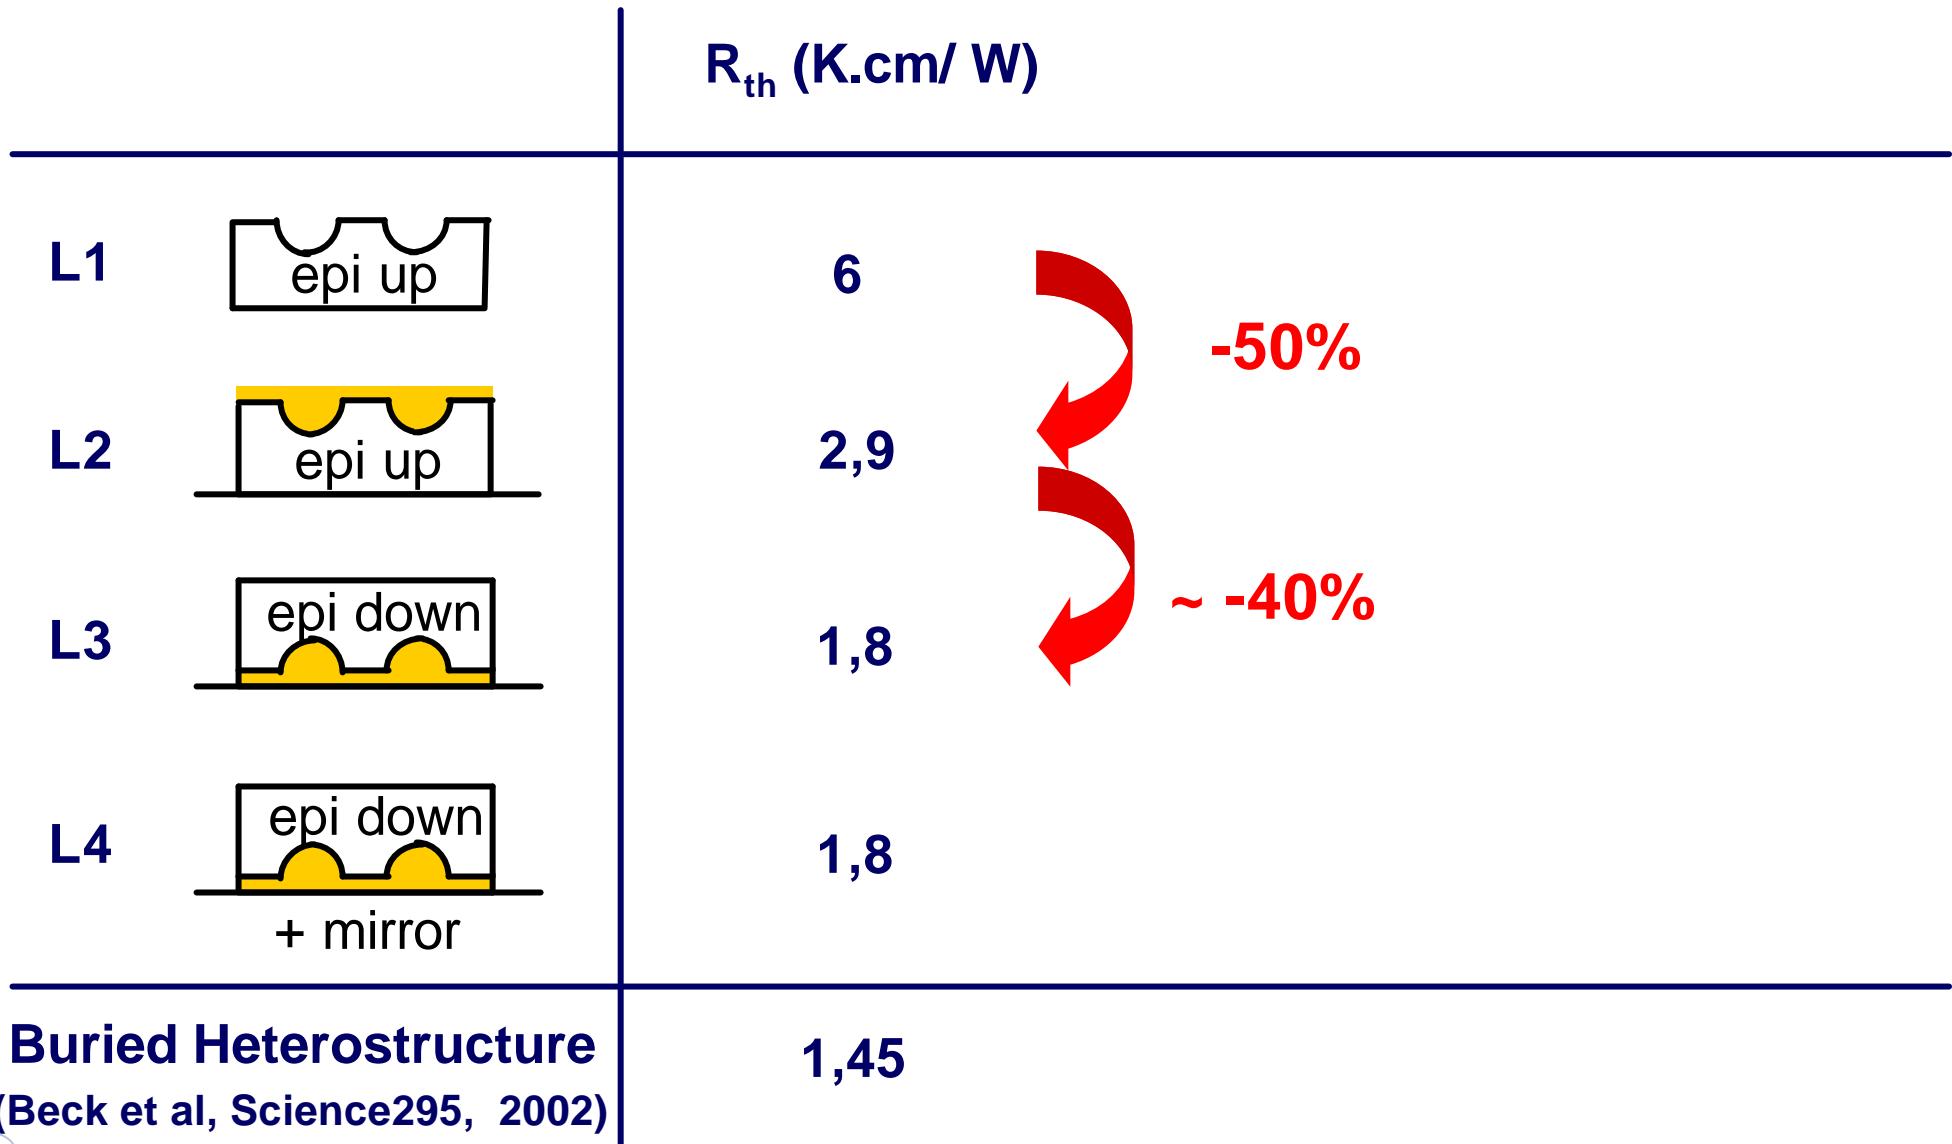

- L1 → $P_{\max} = 49\text{mW}$ for DC=12%
- L2 → $P_{\max} = 78\text{mW}$ for DC=25%
- L3 → $P_{\max} = 102\text{mW}$ for DC=37%

Effect of Thick electroplated Au

Thick electroplated Au - Summary

Thick electroplated Au - Summary

	R_{th} (K.cm/ W)	Max. CW temperature
L1 	6	-
L2 	2,9	130K
L3 	1,8	240K
L4 	1,8	278K
Buried Heterostructure (Beck et al, Science 2002)	1,45	313K

1. Introduction

2. Waveguide Optimisation in GaAs/AlGaAs QCLs

GaAs based guides (plasmon enhanced) / Limitations
AlGaAs and GaInP Guides

3. Enhancement of thermal dissipation properties of GaInAs/AlInAs/InP QCLs

Selective current injection by proton implantation
Thick electro-plated gold

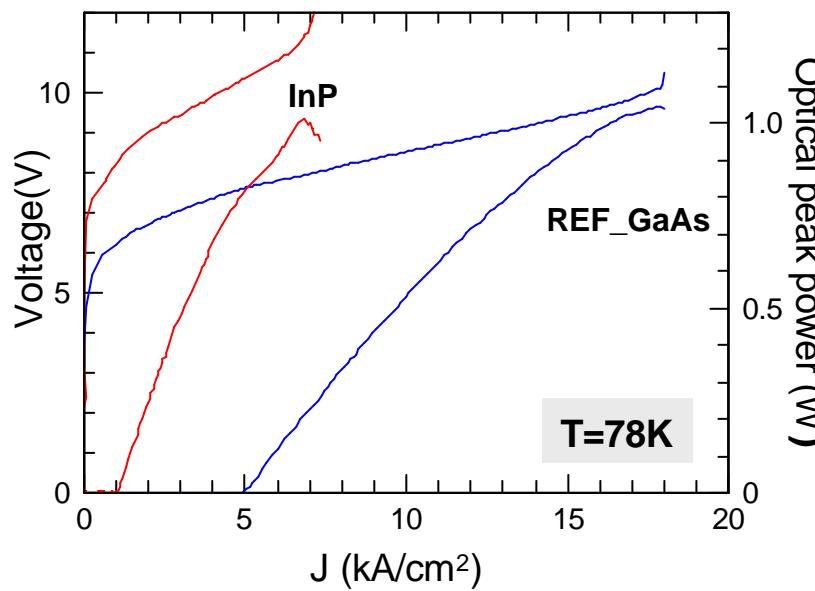

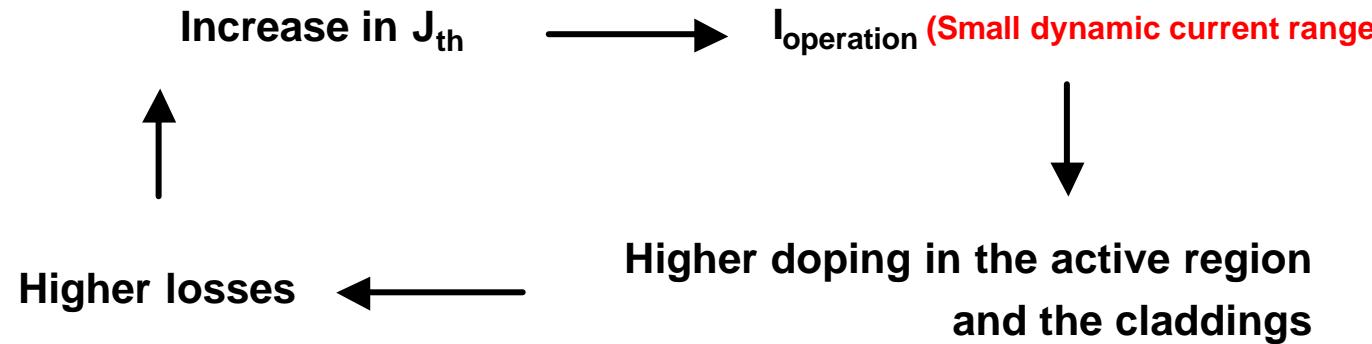

4. Conclusion

- Significant performance improvements realised in GaAs-based QCLs owing to waveguide optimisation
 - Use these waveguide on a bound to continuum structure
- Breakdown of selective current injection (H^+ implanted layers) in InP-based QCLs
 - Application of Fe-doped InP layer
- Significant thermal improvements realised with thick electroplated Au
 - R_{th} close to that of buried heterostructure

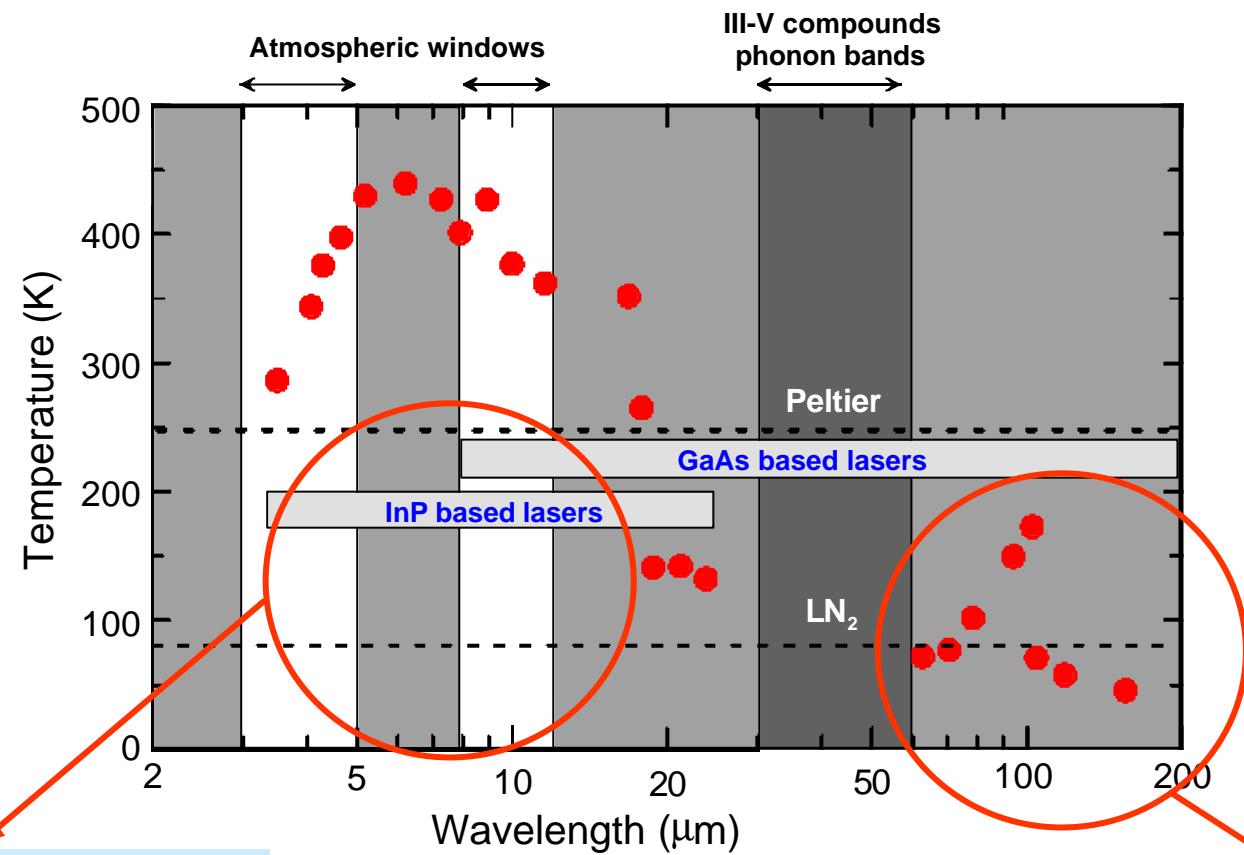

Thick electroplated Au on selective current injection devices

GaAs has an intrinsic lower gain than GaInAs ($m^* > m^*$)

Which material for which wavelength ?

Mid Infrared :

AllInAs/GaInAs/InP QCLs
InAs/AISb QCLs

Far Infrared (THz) :

GaAs/AlGaAs QCLs
